HPE Software Information Management

Comprehensive data protection for the modern enterprise

Annick Lerch
Tom Van Den Broeck

May 2017

Purpose of today's presentation

Introduce

HPE Software's
future

Share

our vision and
the evolution of
Adaptive Backup
& Recovery

Show

the use case
of
backup to
Microsoft
Azure with DP

Going beyond

ABR with
Data Governance

Introducing HPE's Software Future

A compelling strategic vision

Hewlett Packard Enterprise

Provides secure Hybrid IT and Campus Mobility solutions built on its next generation, software-defined infrastructure portfolio

Meg Whitman
President & Chief Executive Officer

\$33B Revenue*

Trusted infrastructure partner with leadership across hardware, software, & technology services

Redefining IT at the edge with campus mobility solutions and IoT

Innovation engine targeting key market inflection points -- hyper-converged, composable.

HPE SW and MF

Pure-play software companies, with solutions such as IT operations, security, information management, big data analytics, cloud, open source and development.

Chris Hsu
Chief Executive Officer

\$4.5B Revenue*

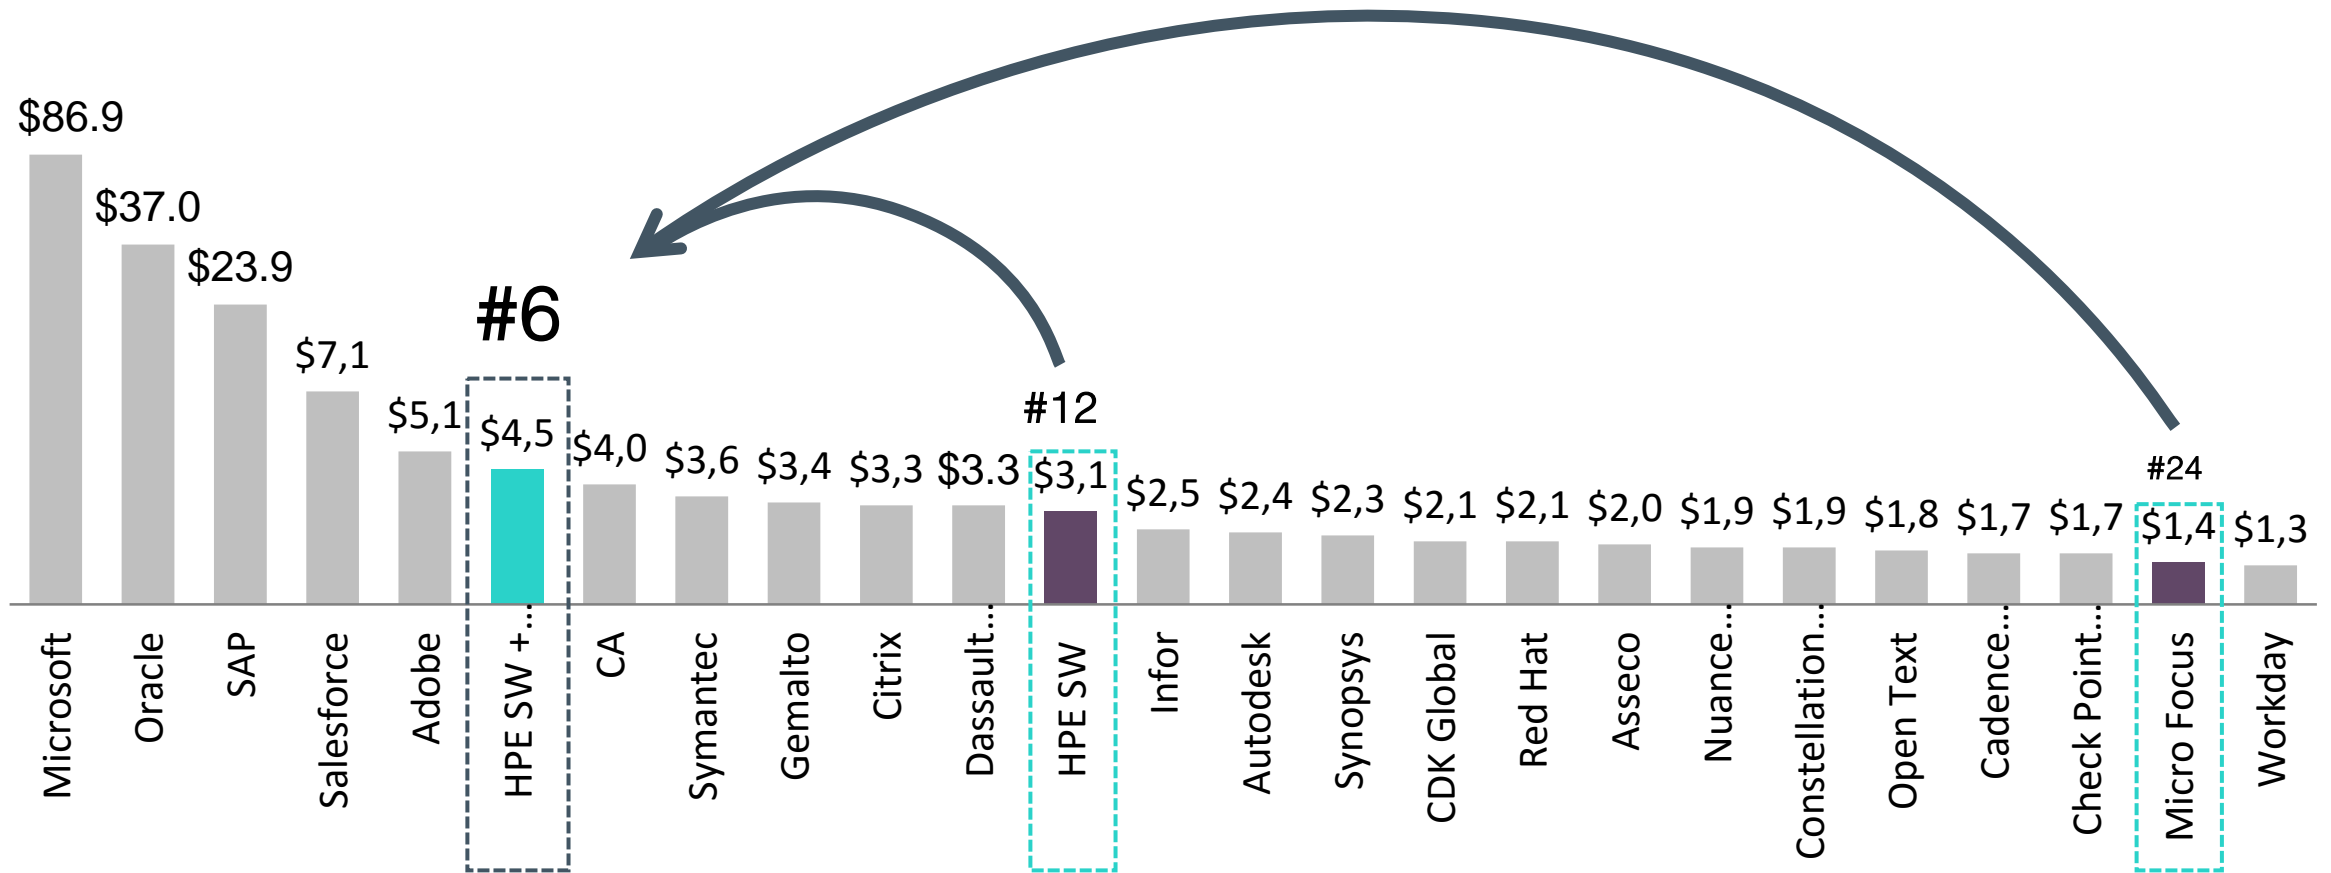

Leading IP in financial services, healthcare, transportation, consumer products, and insurance

Best-in-class cloud, mobility, security services, app development and modernization, IT services, workplace, big data and analytics, and business process services

Combined Micro Focus – an Industry Leader

Software Suite for Enterprise Business

Extract value with advanced analytics

Protect users, apps and data across locations and devices

Help customers understand, organize, control & protect information

Testing and Lifecycle tools for traditional and DevOps

Automate, Orchestrate and Transform IT operations

Big Data Platform

Enterprise Security

Information Management & Governance

Application Delivery Management

IT Operations Management

Micro Focus Portfolio

- Identify based access governance
- Security
- COBOL development
- Mainframe solutions
- Application development and testing
- IT operations management Host connectivity

SUSE Portfolio

- Enterprise Linux
- OpenStack private cloud
- Software-defined storage

VERTICA

IDOL

ArcSight

ATALLA

FORTIFY SOFTWARE

Voltage security

Digital Safe Data Protector

Control Point

Structured Data Manager

Storage Optimizer

ALM AppPulse

StormRunner

Mobile Center

Unified Functional Testing

Service Management

Operations Bridge

Hybrid Cloud Management

Data Center Automation

Network Management

Annual Revenue

Share our vision & the evolution of ABR

Today's world

Today's challenges

- Massive data growth and diversity of new workloads
- 24x7 data center zero tolerance of downtime and maximum resiliency
- More compliance requirements, scrutiny and audit requests (GDPR)
- New security threats (Ransomware)

Today's reality

- SLAs are becoming more stringent; more demanding RTOs and RPOs
- Storage requirements are growing double digit
- Shorter backup windows to backup, test, upgrade and maintain
- Technology disruption: virtualization, software-defined storage, cloud
- Traditional responses to common challenges no longer work

What is needed

- A new innovative approach of addressing backup and recovery - one that adapts as it protects at scale, making backup both smarter and more efficient.

Our vision on Data Protection

Challenges

Transition to
Virtualization and Cloud

Information explosion

Increasing regulations
(GDPR...) and security
threats

Unified Solution

**HPE Adaptive
Backup and
Recovery
Suite** 

E2E Backup Solution
for physical, virtual and
Cloud

Analytics & Insight

Policy-based storage
tiering

Customer Value

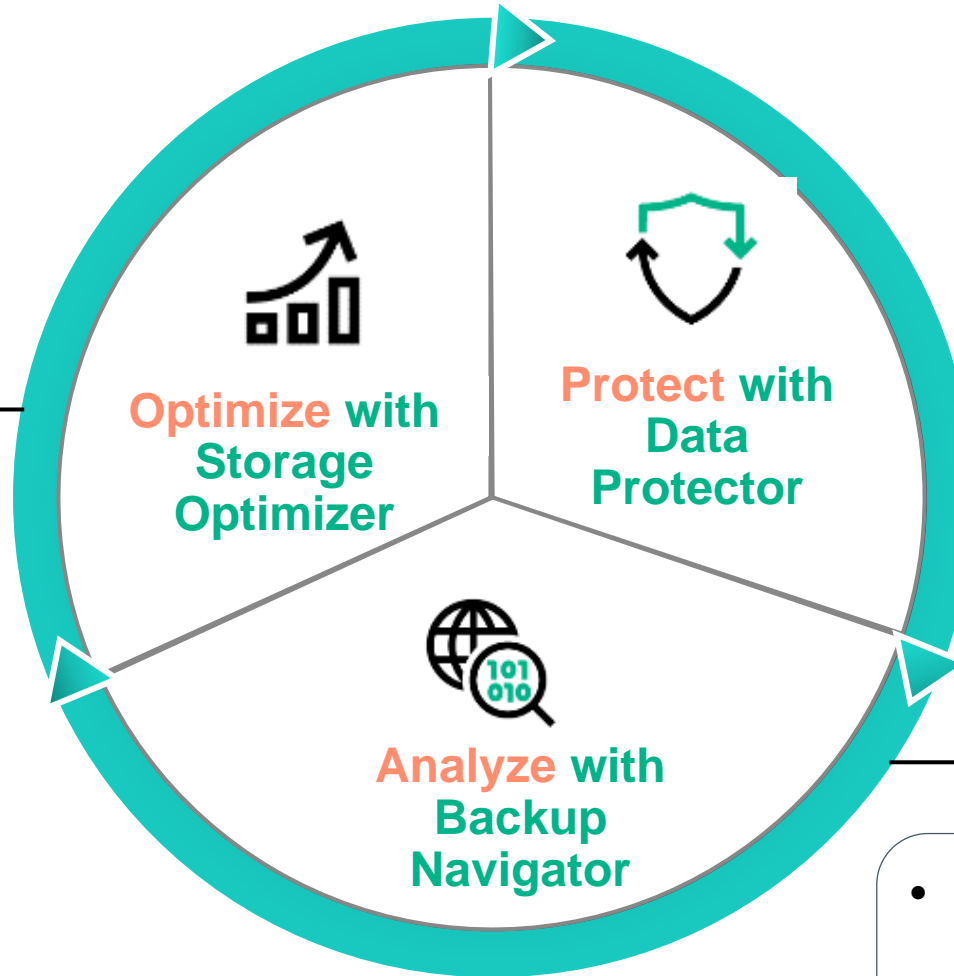

Improved business
insight and agility

Improved TCO with
reduction in storage

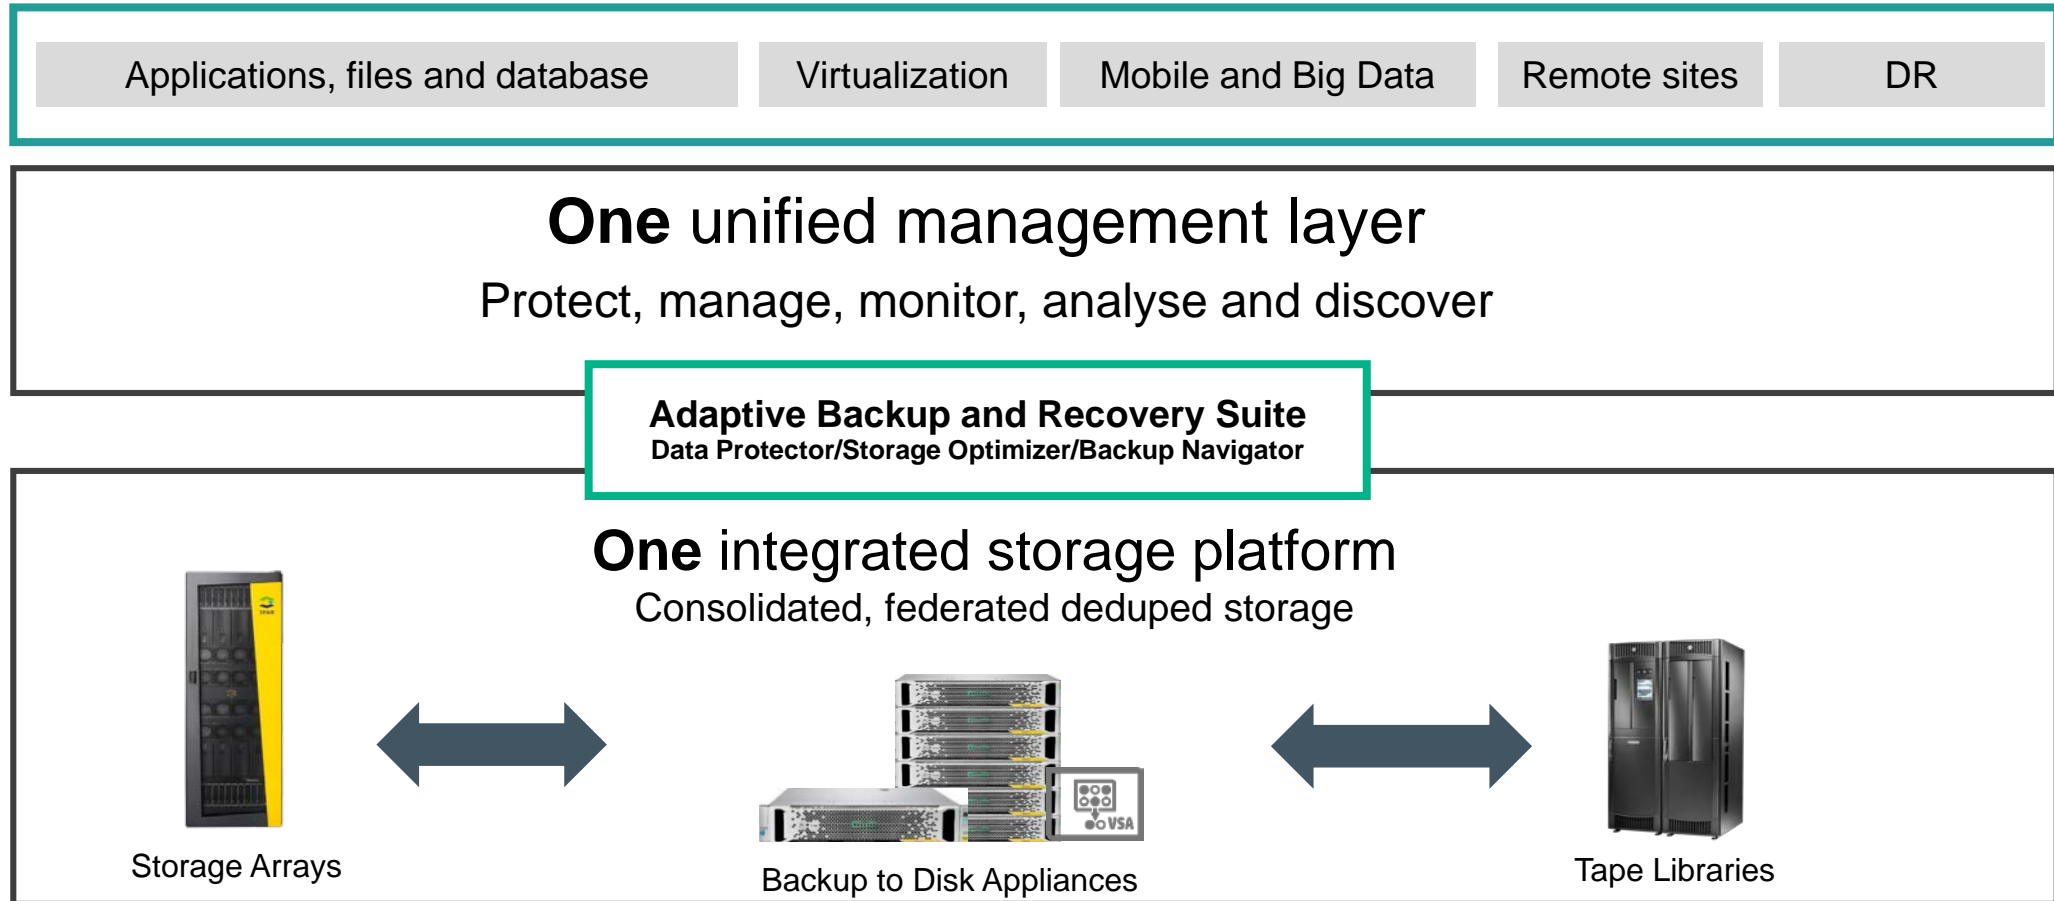

Increased efficiency

Improved compliance
& security based on
metadata

ABR's continuous cycle of analytics and optimization

A unified protection for the modern enterprise

Belgian customer success stories

- **Biggest telecom operator :**
 - Choice for DP over competition for full backup coverage for physical and VMWare with 3par and StoreOnce.
- **Biggest European military organization :**
 - DP customer for many years for their physical and Hyper-V env, going for full ABR suite (Storage Optimize and Backup Navigator)
- **Floor manufacturer:**
 - DP customer for many years using Data Domain Boost as backup to disk devices, spread over Europe.
- **Big media concern using DP+3Par+StoreOnce**
- **2 of the largest Utility Energy Providers in Benelux :**
 - Using outsourced DP env, including biggest Backup Navigator installation in Europe.
- **Many hospitals using DP in cooperation with Realdolmen**

More than 60K customers WW including HPE.....

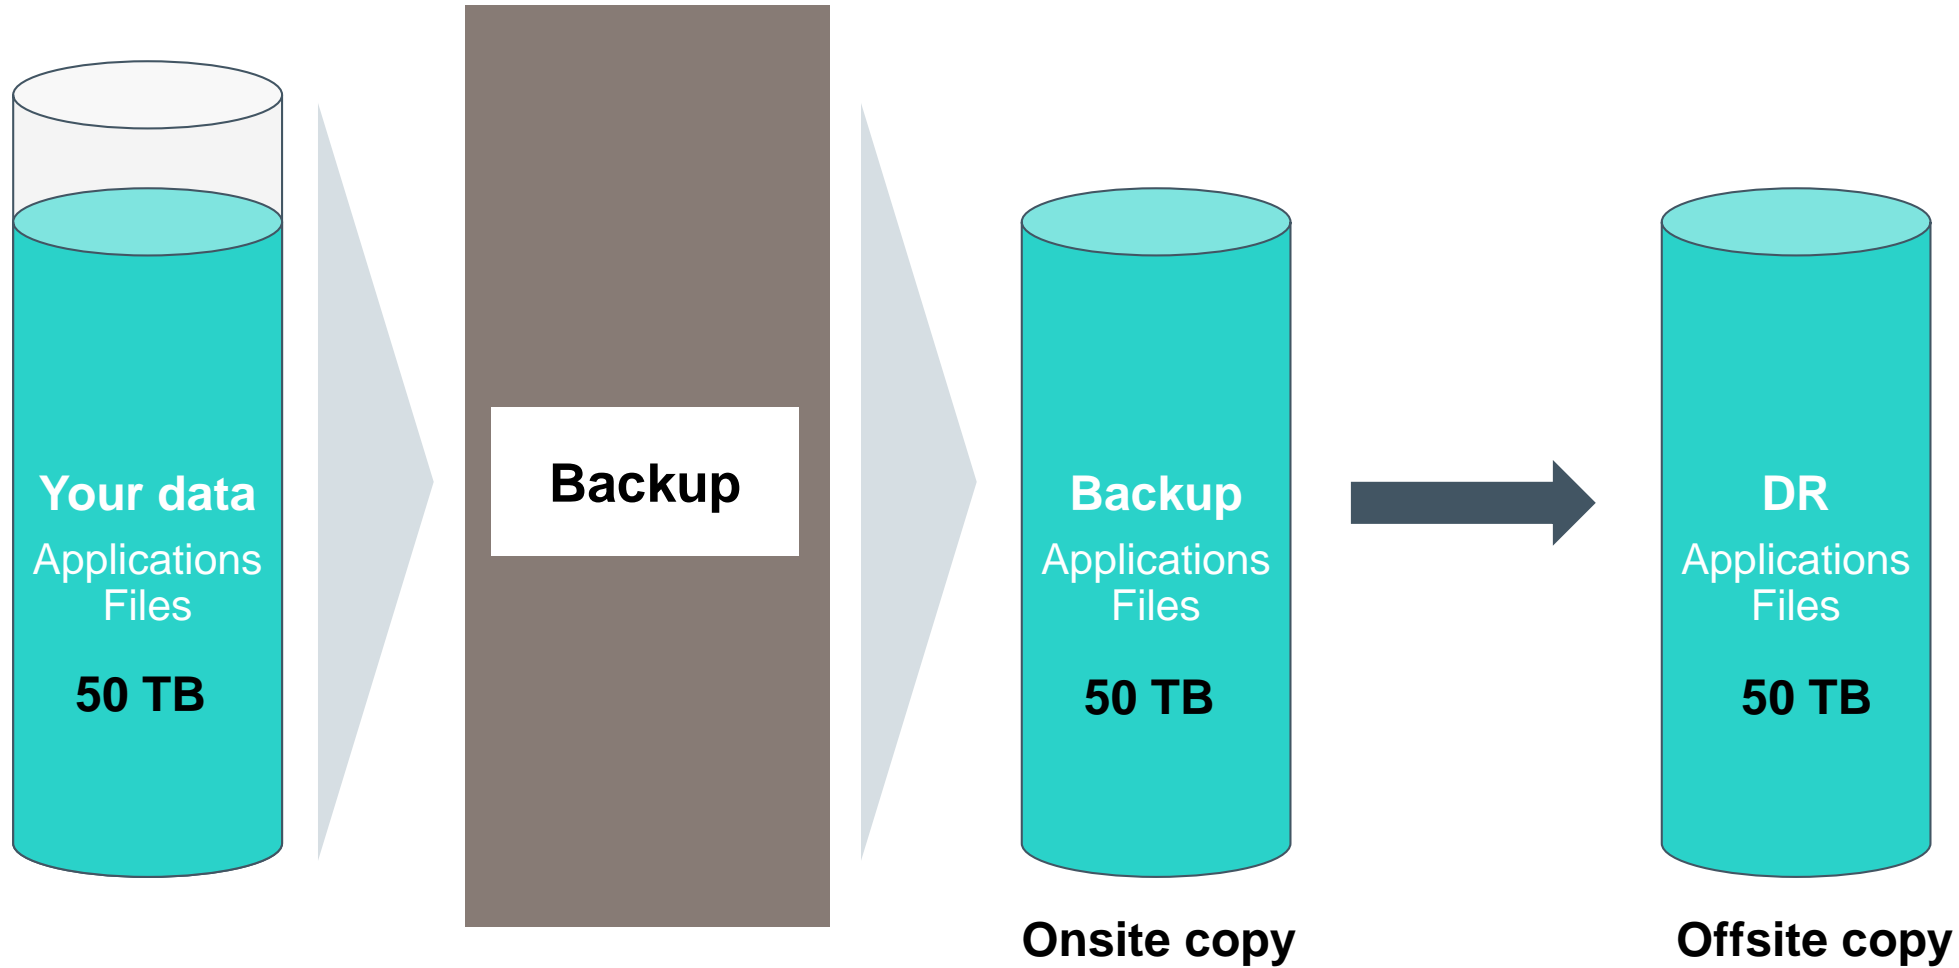

ABR in practice

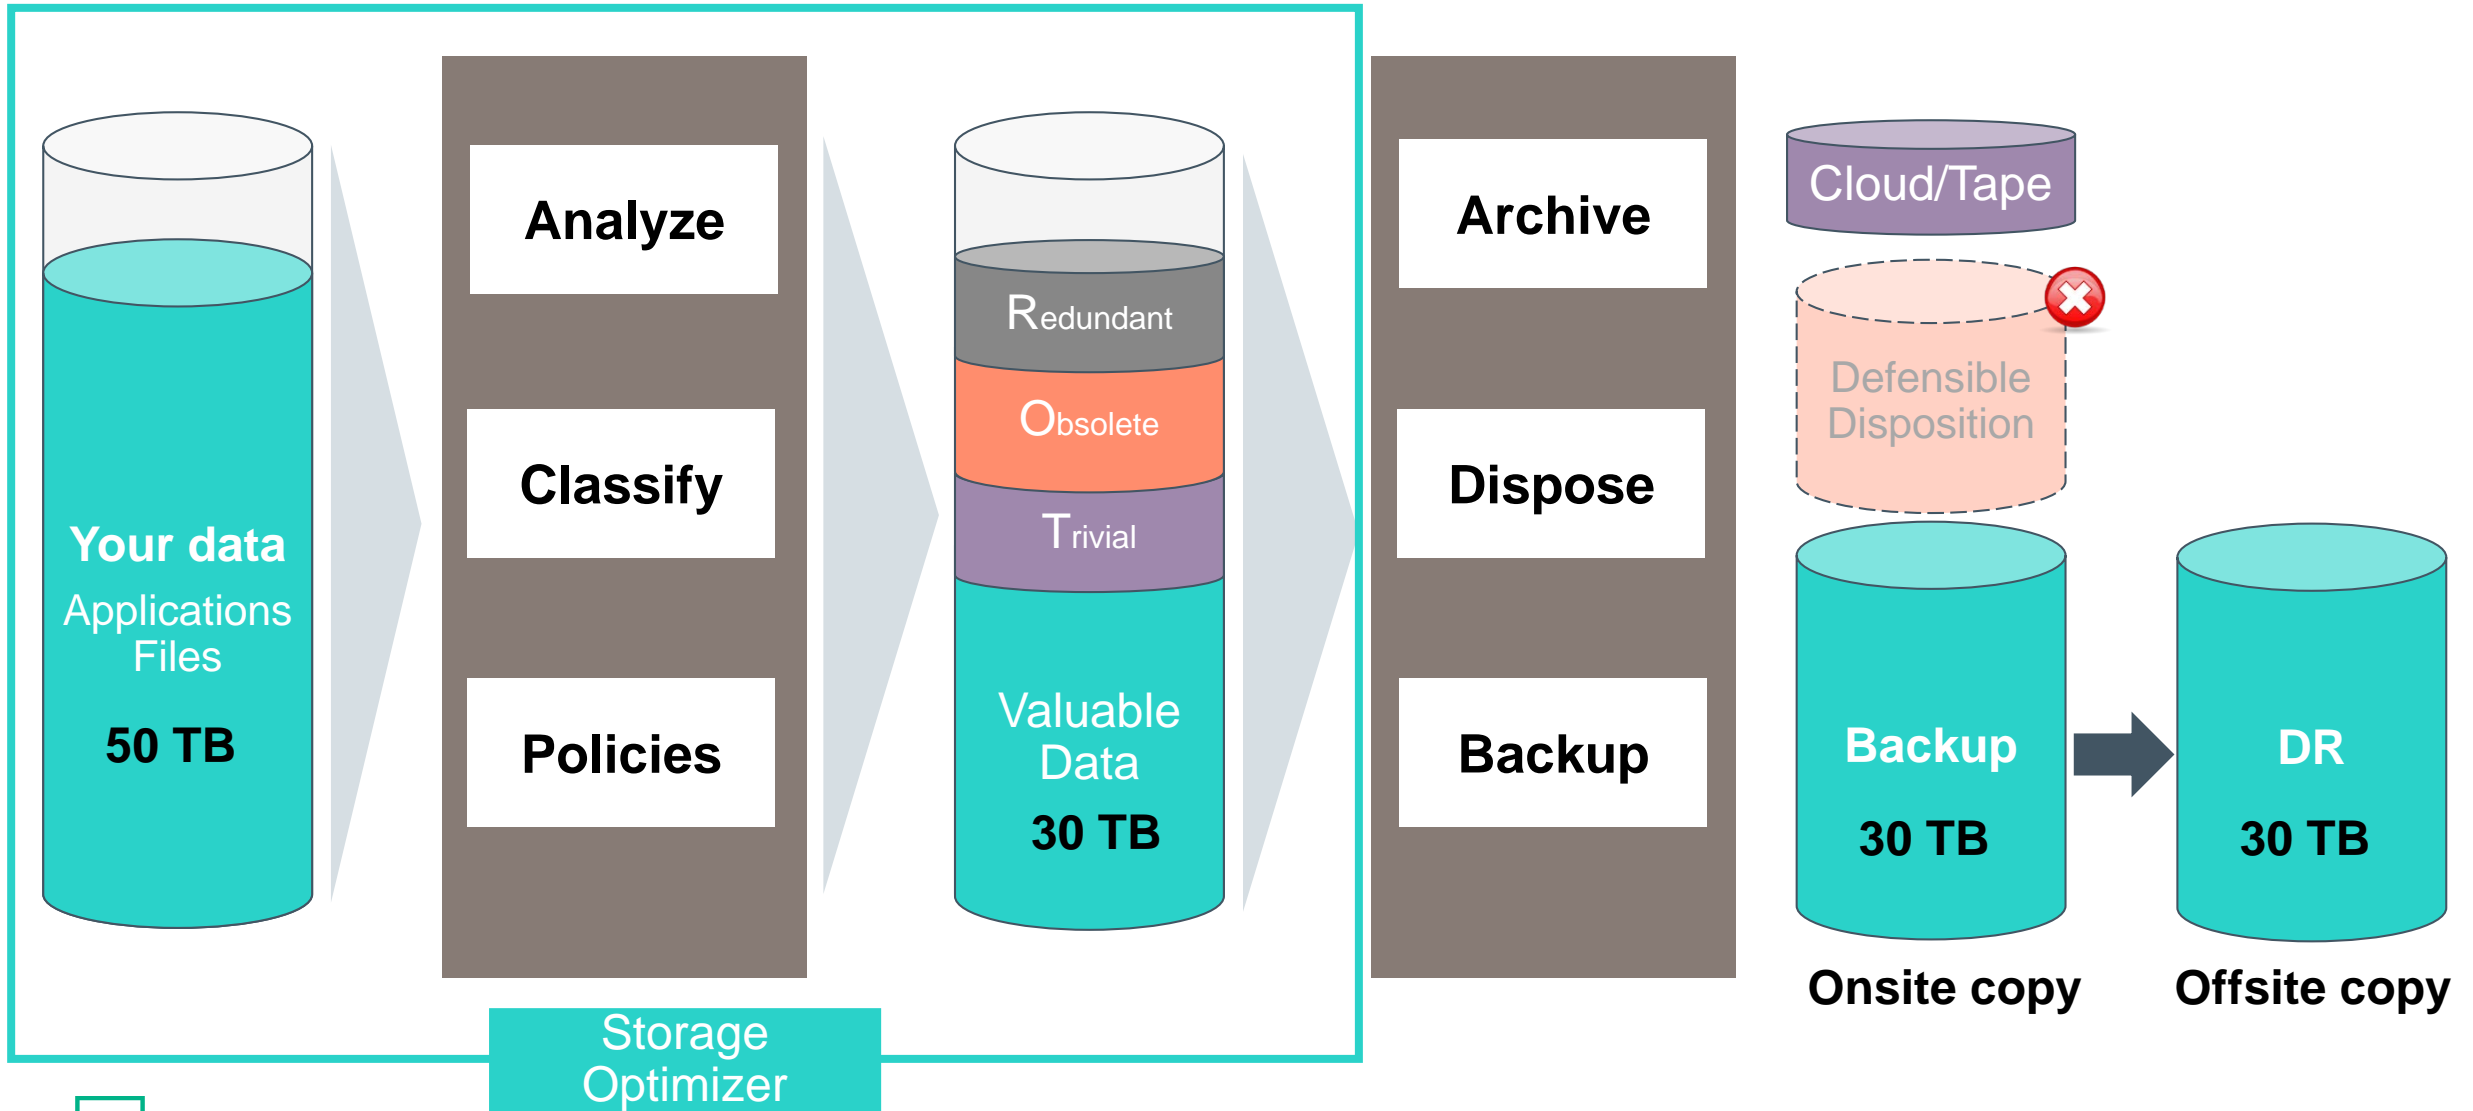

ABR's continuous cycle of analytics and optimization

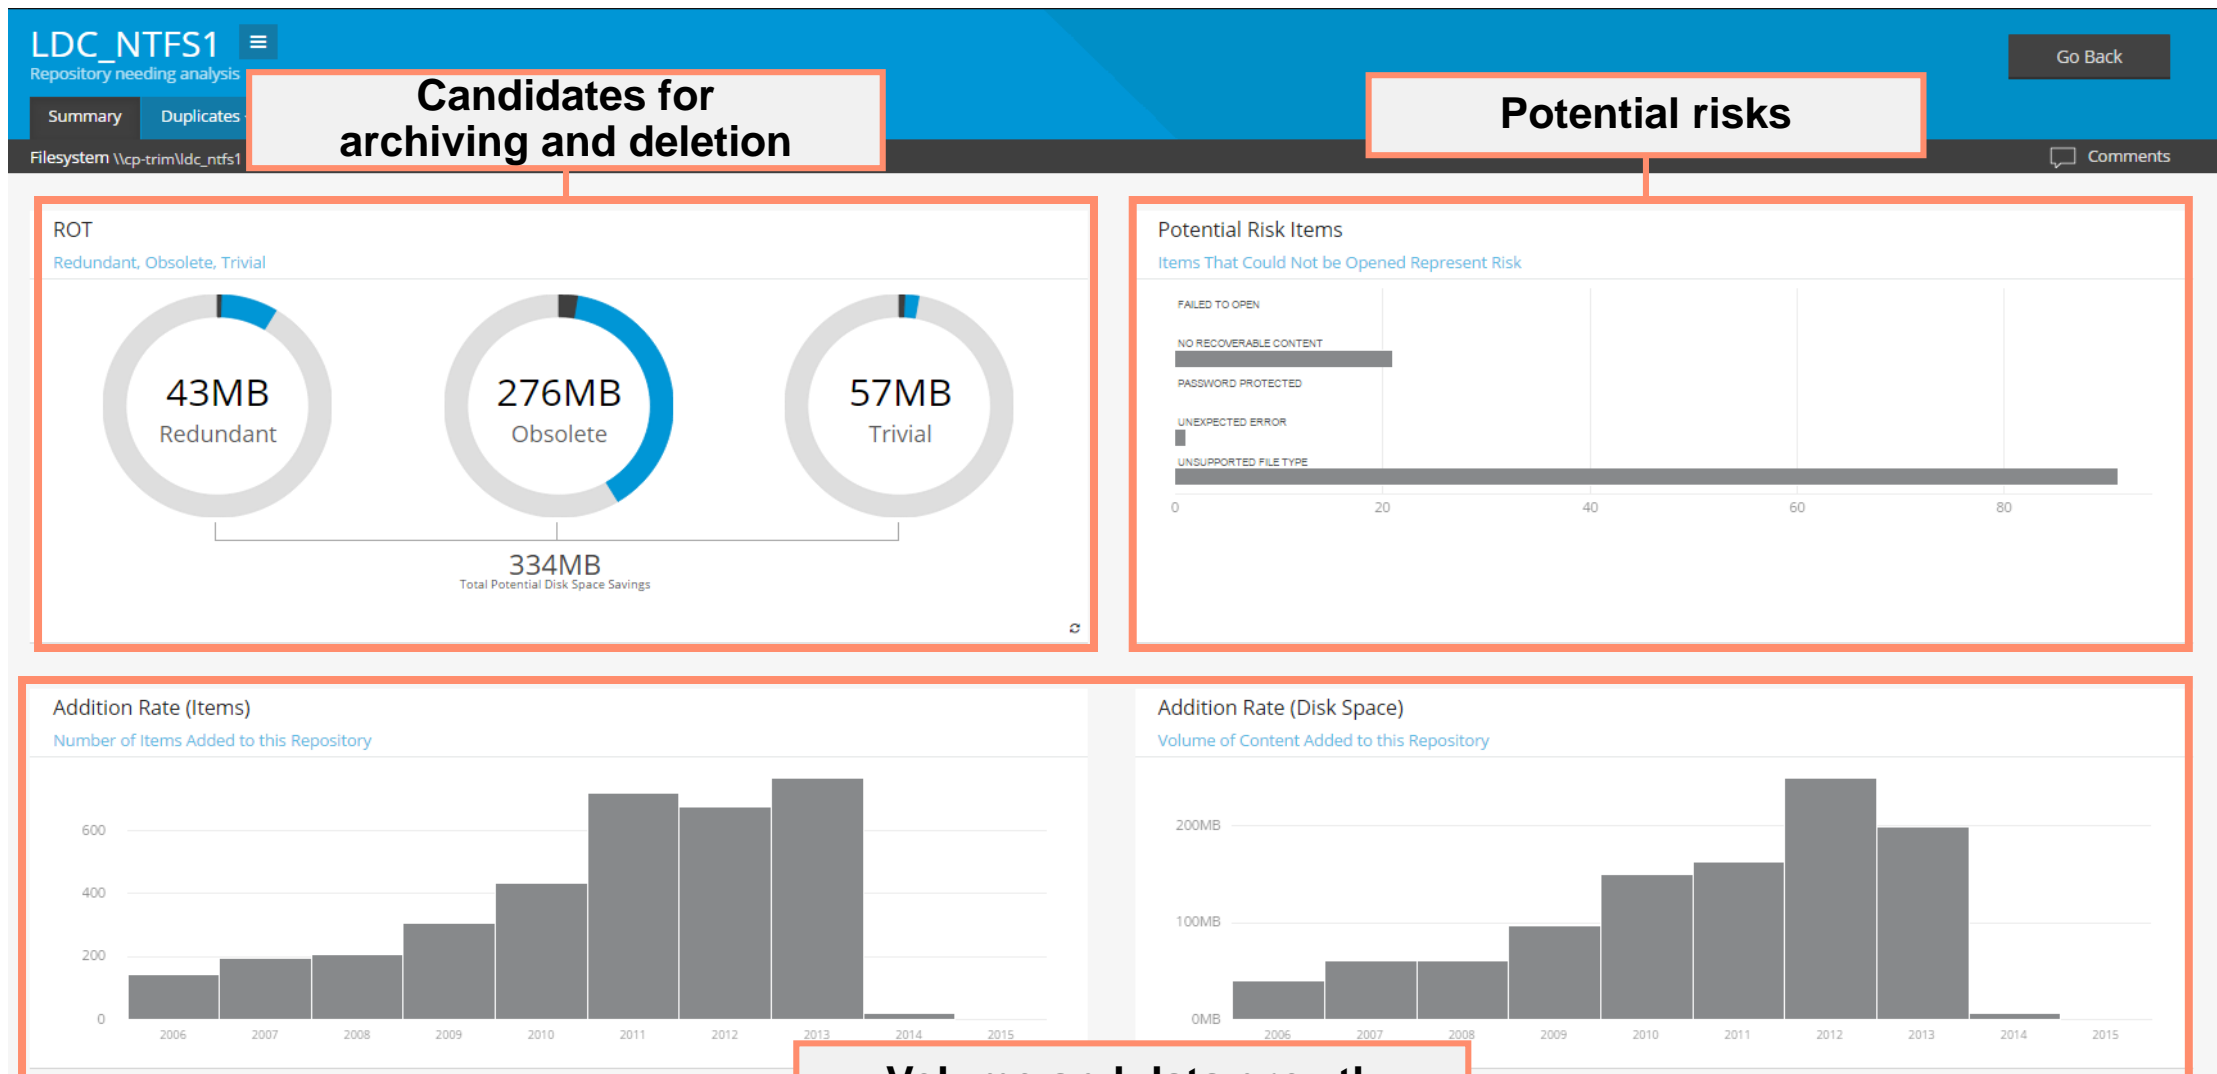

A typical backup scenario

Start with analyzing and classifying your information

HPE Storage Optimizer: manage information based on its value

Reduce risks and costs, improve backup

Lower risks associated with data mismanagement

- Dispose of information that is no longer valuable
- Bridge gap between IT and legal

Improve backup and recovery

- Identify redundant, obsolete, and trivial data that is not required for backup
- Speed-up backup up to 50% by archiving and stubbing files based on policies

Reduce data footprint & storage costs

- Materially lower cost on primary storage and backup storage
- More effectively tier storage for added costs savings

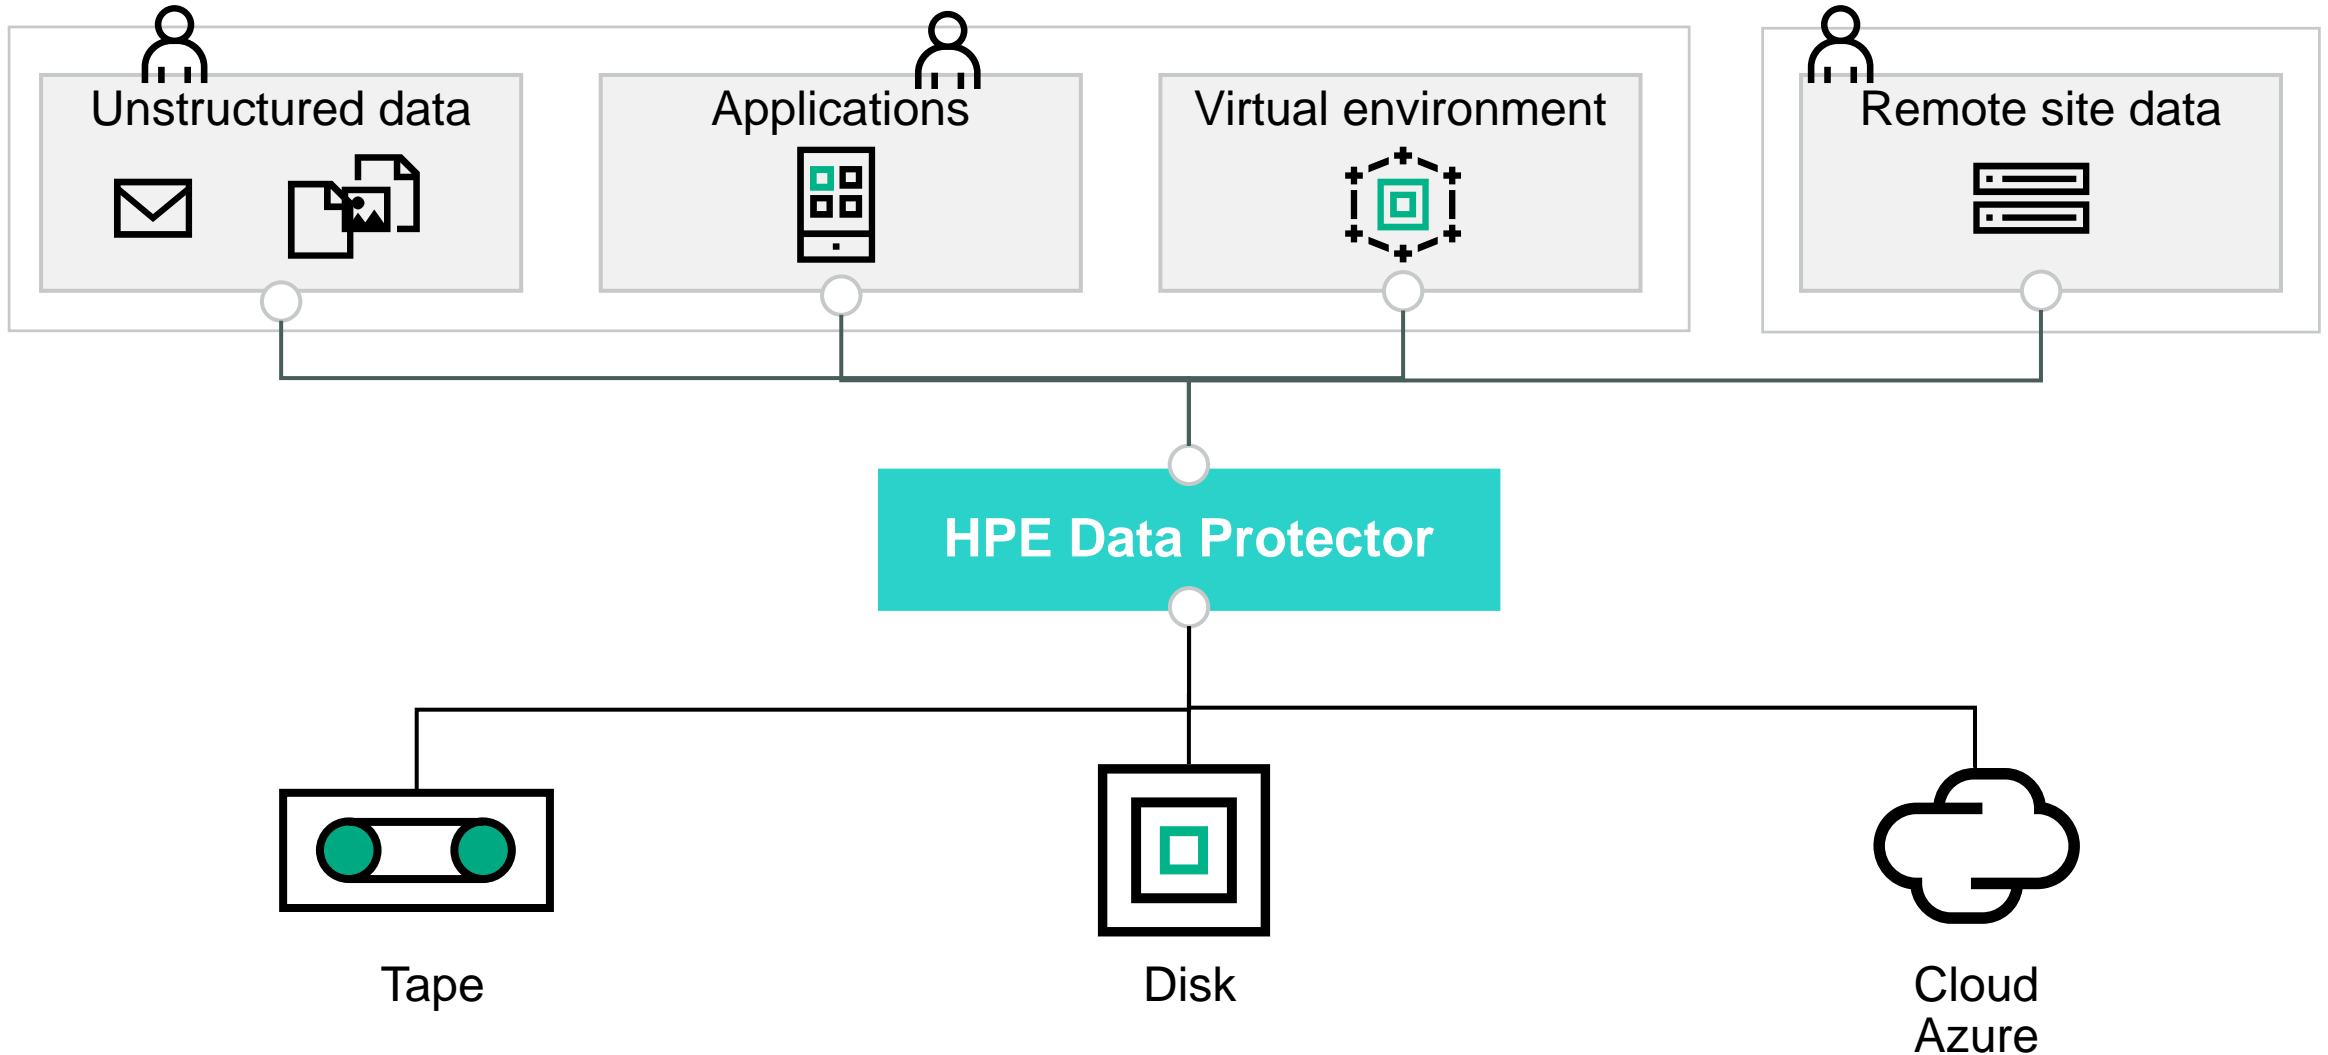

Improve infrastructure management

- Optimize storage with high levels of transparency and intelligence
- Get more life out of infrastructure without additional CapEx

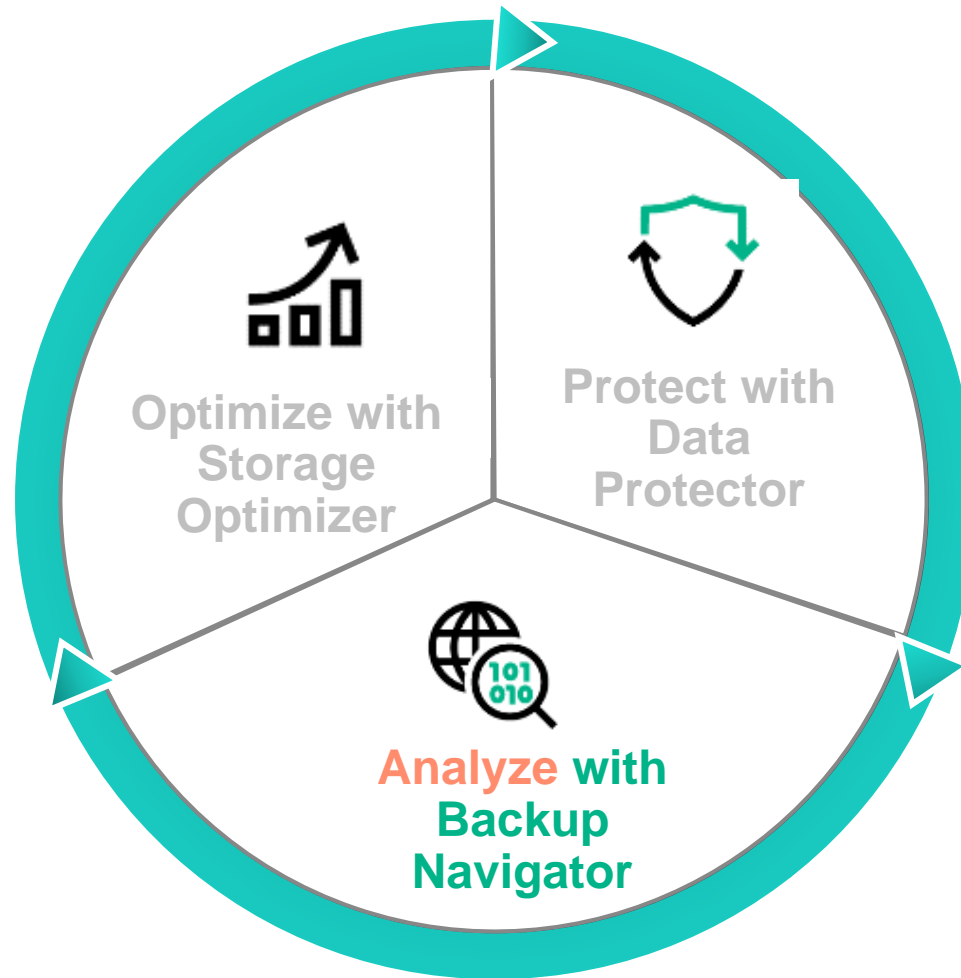

ABR's continuous cycle of analytics and optimization

Consolidated and standardize protection with Data Protector

ABR's continuous cycle of analytics and optimization

Customer survey shows analytics help improve backup and recovery

71%

Reduced backup times

57%

Reduced cost of storage

78%

Reported improved restore times

Access more than **450** customer testimonials here

HPE Backup Navigator – Analytics and advanced reporting

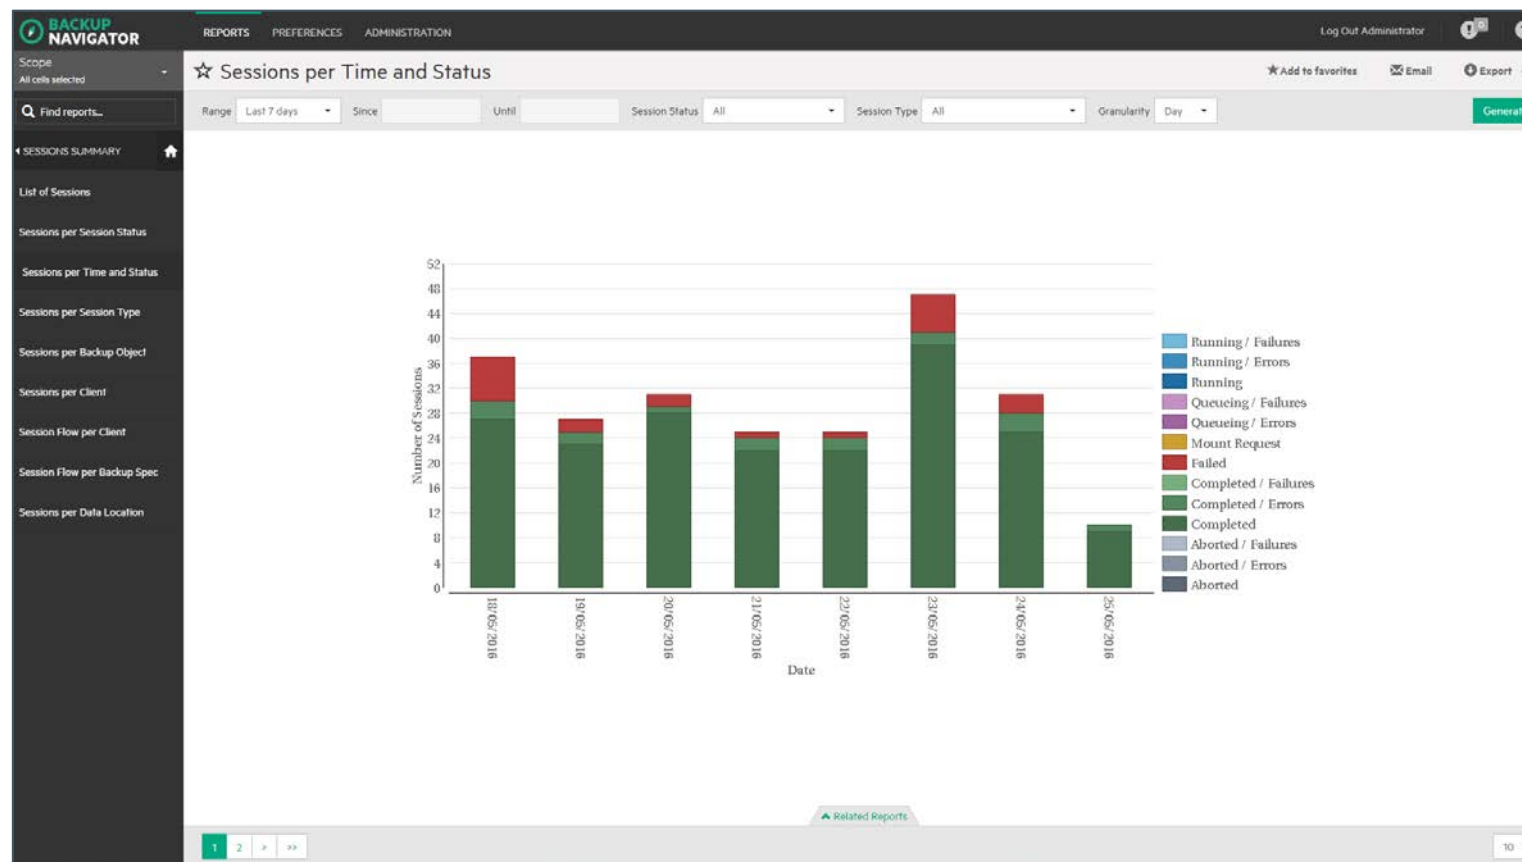

>90 Reports, 75+ KPIs

Schedule and Subscription-Based

Web-based User Interface, multi-user

Interactive Dashboards

Real-time Predictive Analytics

Analyze Data Protector infrastructure, locate and troubleshoot problems, simplify usage in multi-cell, multi-tenant environments

Customer scenarios: how analytics can improve backup

 Gain insights into backup environment	 Troubleshoot and resolve issues	 Meet recovery point time needs	 Predict issues, future resources
Session overview	Health/status monitoring and events	Application RPOs/RTOs I need to prove that we can meet	Data growth trends I need to add more
How do I gain a full view of my backup environment?	I see errors in the logs but I don't know what's causing it.	recovery objectives for some critical applications.	applications to my backup plan. Do I have enough
Physical & virtual infrastructure overview	Drill-down reporting & related reports	Average backup completion times	capacity? Deduplication report
How do I know protection gaps? Clients/ VMs without backup	How do I quickly troubleshoot and resolve the issue? Remediation steps	How do I find out that we can meet the RPOs/RTOs that are agreed upon?	Will there be any potential resource conflicts? schedules

Going beyond ABR...

Information Lifecycle Management & Governance

Information Lifecycle Management & Governance

Backup to Microsoft Azure with DP

Microsoft

Powers Microsoft Learning with HPE Data Protector and HPE Storage

Challenge

- Management overhead to ensure that data is correctly configured
- Backup and restores cumbersome, taking a very long time
- **Thousands of servers, many virtualized, must be efficiently and rapidly backed up and replicated to Microsoft Azure**

Solution

- HPE Data Protector, HPE StoreOnce, HPE 3PAR StorServ

Result

- Application restores fast and easy
- Granular restores of databases, log files, transaction files, etc.
- Reassurance that data is fully protected
- Streamlined management
- Customers know that their data is safe and intact

[Watch Microsoft in a video testimonial](#)

Why using the cloud for backup?

- Scalability
- Pay-as-you-grow
- Reduce administrative overhead
- Meet regulatory compliance requirements

HPE Data Protector Backup or Copy to Cloud – Features

- Object Copy to Cloud. Backup to local device first for good performance.
- Supported for files and VMware VM's. Other data types to be added later.
- **Two options are available:**
 - Native directly to Cloud with OpenStack Swift (HPE Helion and Microsoft Azure)
 - Via gateway appliance (i.e. Amazon AWS or Microsoft StorSimple)

Native copy to cloud

Copy to Microsoft Azure Cloud

MS Azure also provides an Object Storage interface used by DataProtector and it is basically used the same way. This ensures universal access across your backup/recovery strategy. Data is compressed and encrypted by default.

Backup to cloud via gateways

Backup to Cloud via Microsoft StorSimple Gateway

- MS StorSimple is an appliance/gateway approach to MS Azure
- It creates a iSCSI drive (LUN) which can be easily seen by DP
- Backup is to a File Library on that LAN, StorSimple will upload/download with Azure
- Restore is also the same as with any other device
- Data is optimized before being moved into the Cloud
