

EVERYONE IS GOING DIGITAL, BUT WHAT ABOUT YOUR LEGACY SYSTEMS?

Are your core applications, production process or other crucial business applications running on older technology, such as a mainframe? Are you spending a lot of money on expensive licenses for your legacy system? Are spare parts for your mainframe really hard to find? Are you finding it difficult to attract employees with the necessary knowledge of the outdated technology? If so, then you probably want to get rid of those legacy systems as soon as possible and go digital.

But how can you change the heart of your IT system?

COOPERATION AS A BASIC PRINCIPLE

The Realdolmen DevOps Factory will take over the management of your legacy system for a certain period. This will give you time and space to start up a digitization and migration project, replace old applications by new ones and work with us to train your employees in new technologies and other domains.

WHAT DOES REALDOLMEN OFFER YOU?

- We will manage your legacy system for you, on-site or as a service.
- We will provide the necessary profiles to guide you through your digitization project.
- We will handle the integration of existing systems with modern applications.
- Our experts will work together with yours, using the latest technologies that are right for your business challenges.
- We will provide fixed teams that are up to date on your business.
