

# "La Cybersecurité, une vaccination pour votre environnement digital"

General program introduction

# Program overview

## 1 Security market watch “Understanding the trends, challenges & threats”

**Goal:** Understanding the challenges and risks you face by clarifying and becoming aware of the impact and likelihood of threats

**By:** Inetum-Realdolmen – Thomas Tardieux

## 2 Security vision “How to navigate your security transformation”

**Goal:** Gaining practical insights in how you can approach your digital security transformation journey to improve your security posture and support the hospital business objectives

**By:** Inetum-Realdolmen – Thomas Tardieux

## 3 Achieving adequate cybersecurity in Healthcare with Microsoft technology

**Goal:** Gaining insights in achieving adequate cybersecurity in healthcare

**By:** Microsoft – Jonathan Jacqmin & Nadia Aime

# Security Vision

How to navigate your security transformation

# Content

**1** Security transformation and the shift

**2** How to start your security transformation journey

**3** Key Takeaways

1

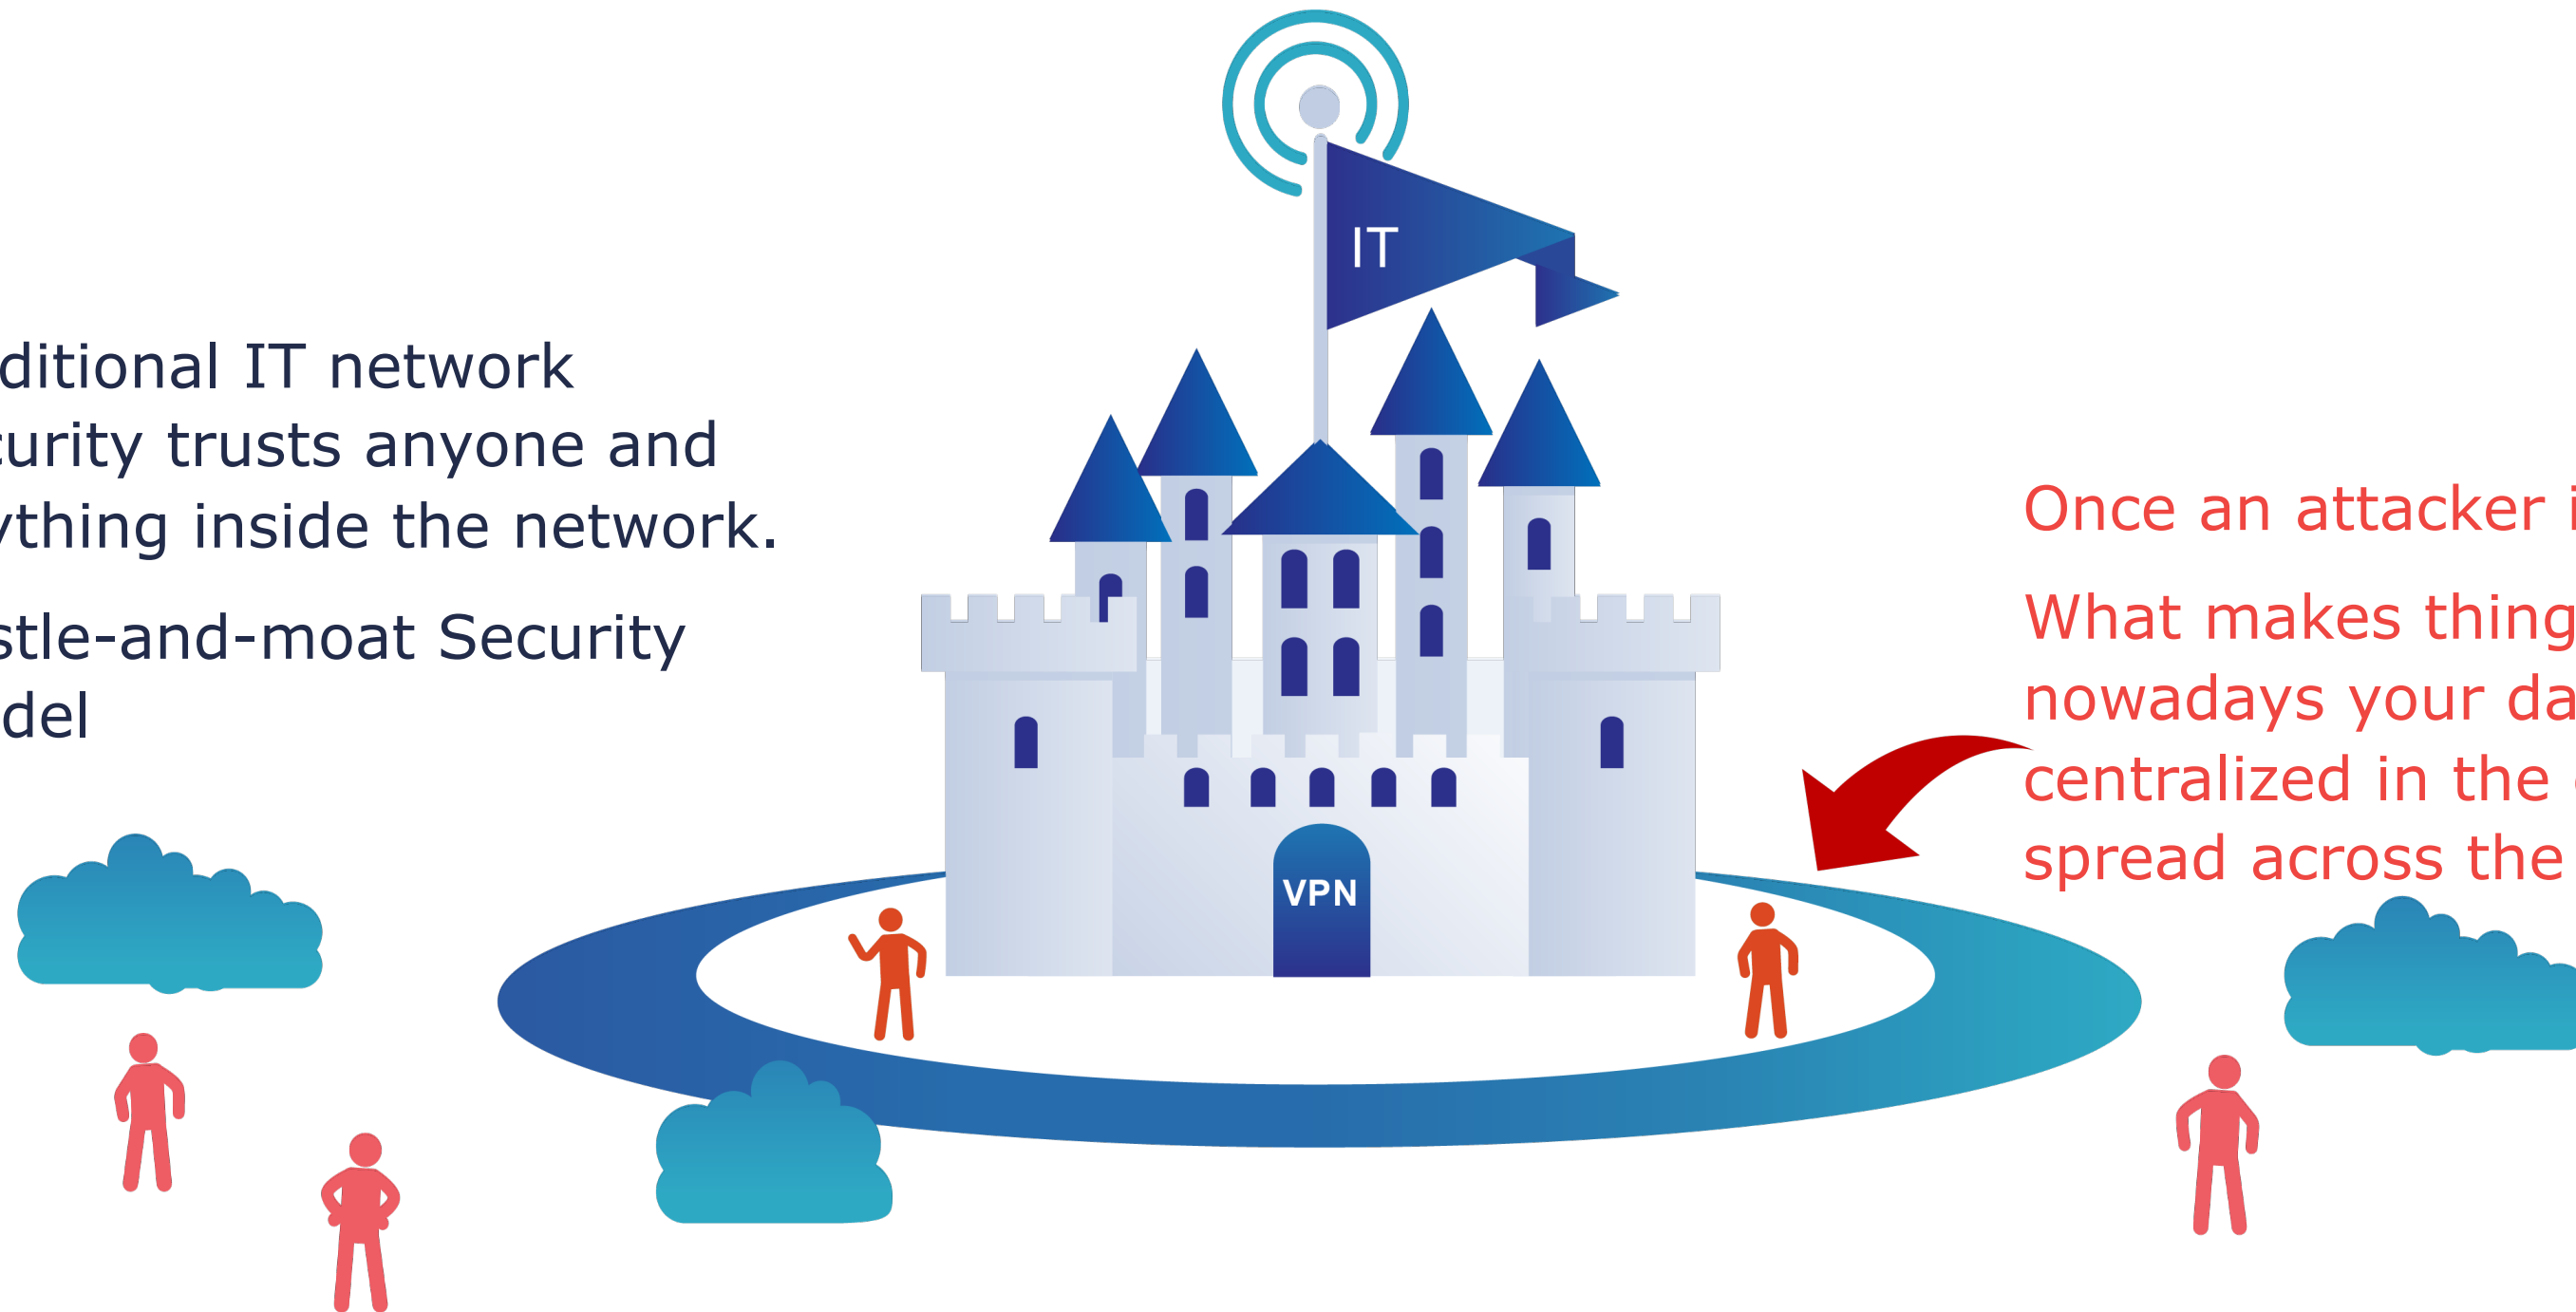

# Security transformation “the shift”

from a traditional security to modern security approach

# Traditional security in the “Old Days”

Traditional IT network security trusts anyone and anything inside the network.

Castle-and-moat Security model

Once an attacker is in, they're IN.  
What makes things worse, nowadays your data is no longer centralized in the castle, but spread across the Cloud.

# Why shift to a new modern approach?

## The world has changed

~~Users are employees~~

Employees, partners, customers, bots

~~Corporate managed devices~~

Bring your own device and IoT

~~On-premises applications~~

Explosion of cloud applications

~~Monolithic applications~~

Composite apps and API's

~~Corp network and firewall~~

Expanding perimeters

~~Local packet tracking and logs~~

Explosion of signals

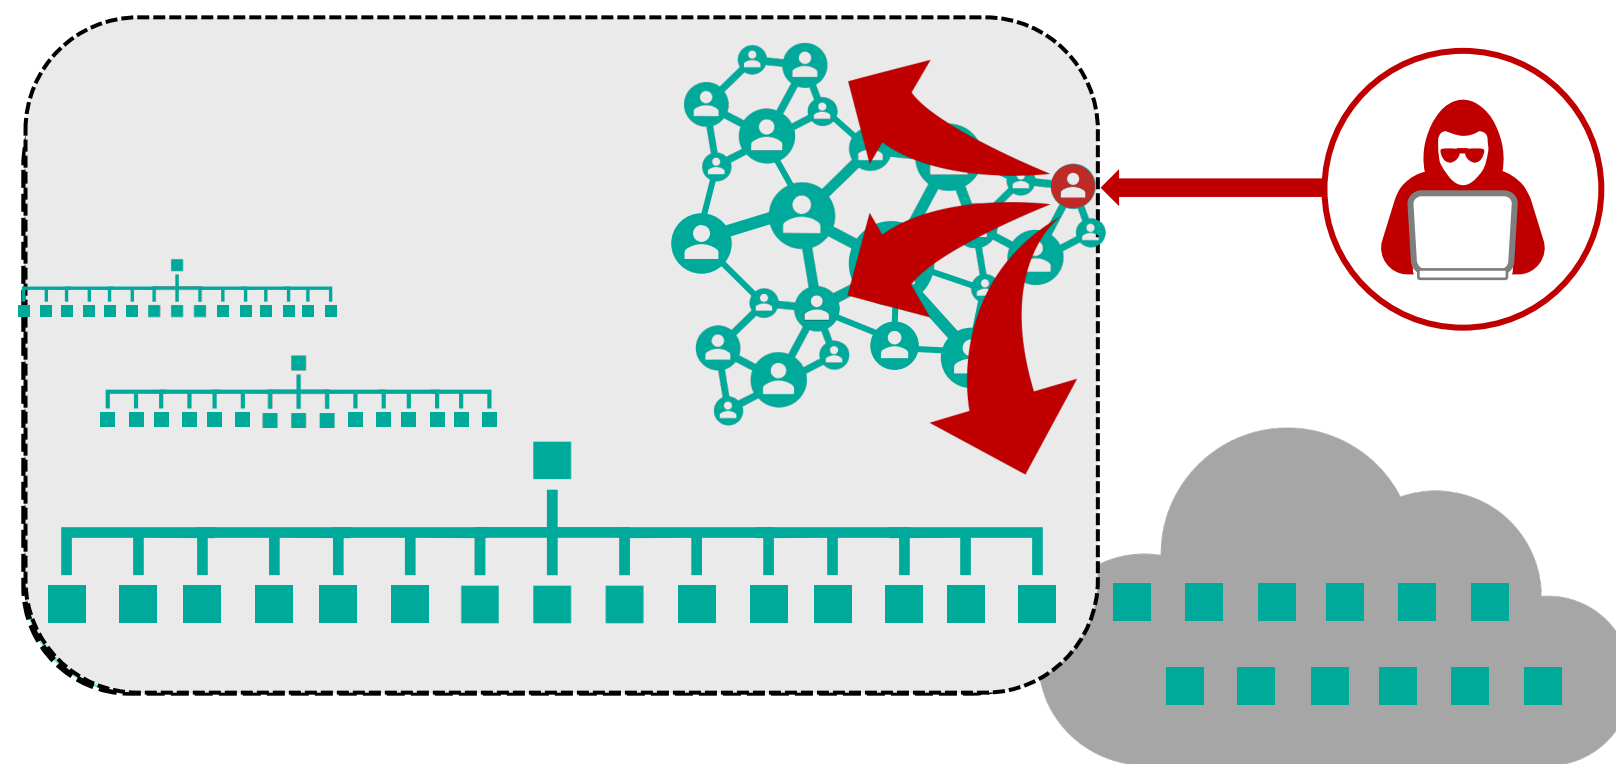

~~On premise solutions~~

Containerized solutions, microservices

# Attackers shifted already

Evolution of the the modern workplace and the attacker's response

- 1. IT Security is Complex**
  - Many Devices, Users, & Connections
- 2. “Trusted network” security strategy**
  - Initial attacks were network based
  - *Seemingly* simple and economical
  - Accepted lower security within network
- 3. Assets increasingly leave network**
  - BYOD, WFH, Mobile, and SaaS
- 4. Attackers shift to identity attacks**
  - Phishing and credential theft
  - Security teams often overwhelmed

**Access Control:** Keep **Assets** away from **Attackers**

# So we need a new security perimeter

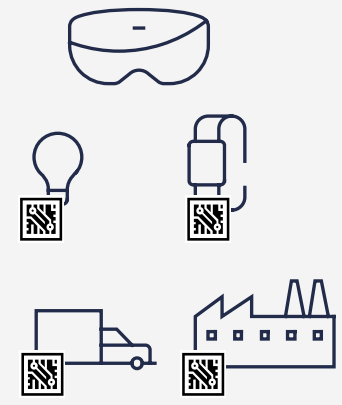

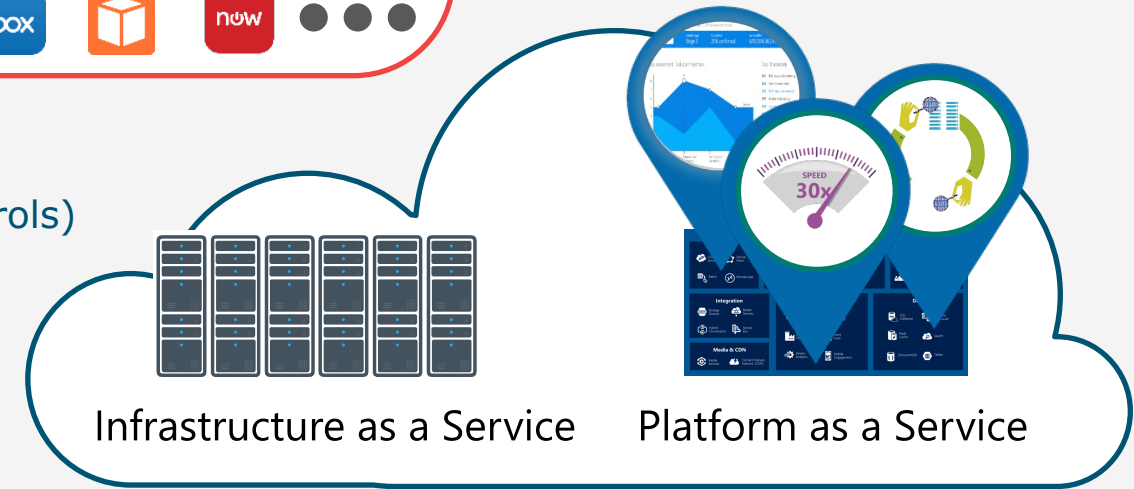

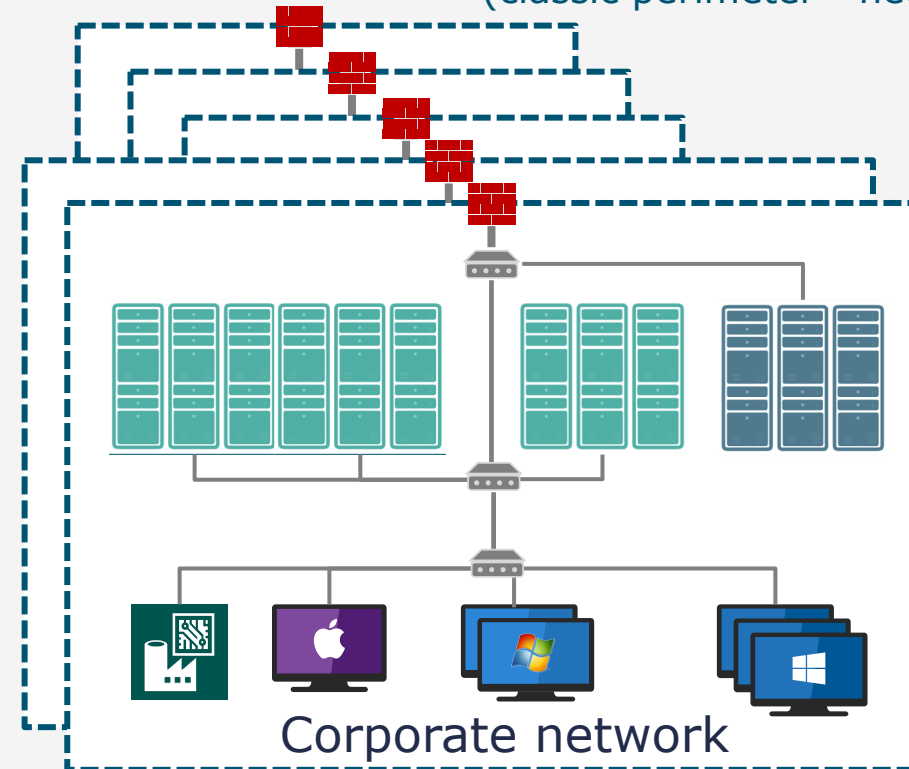

## Identity Perimeter

(modern perimeter / identity controls)

## Network Perimeter

(classic perimeter - network controls)

# New reality needs new security mindset

## Security mindset shift

- Security is **essential** to evolve as an organization in the **digital transformation** era and become digitally, secure and resilient
- Security is essential to **protect the trust** that is needed in customer, partner and employee relationships in order to do business
- Security is a **business enabler** and **protecting business assets and goals** of the organization by reducing risks to acceptable levels and allowing business to make use of new technologies to stay relevant. So, all **about staying safe while doing what is needed to stay relevant.**
- Security is not only protecting profitability and reputation but also good for **sustainability (ESG score)** and **shareholder value**

# New reality needs new security approach

## Security approach shift

- Security approach needs to evolve from a solely maturity-based approach to a **business risk driven security approach**
- Embedding **zero trust approach** on top of your traditional approach

**NEVER TRUST, ALWAYS VERIFY**  
**ZERO TRUST**

# New reality needs new security principles

## Zero trust principles

**Verify  
Explicitly**

**Least  
Privilege**

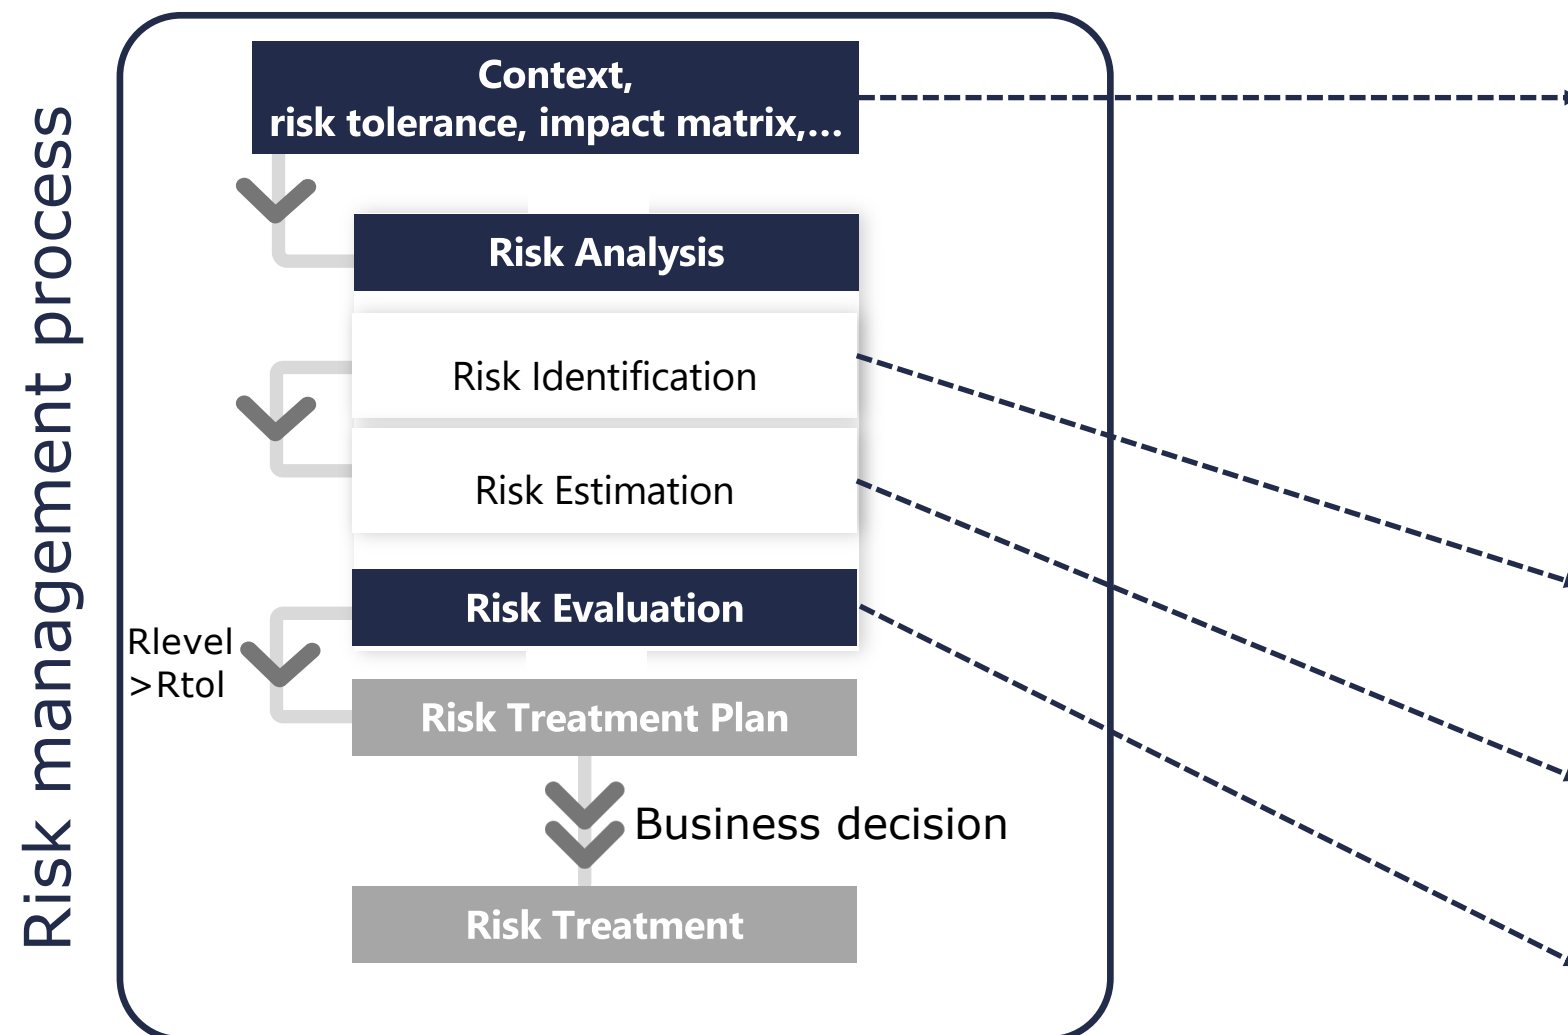

**Assume  
Breach**

**Zero trust** is an integrated approach to securing access with adaptive controls and continuous verification across your entire digital estate

# Risk, the essence of your security approach

**Business risk driven security** to find the **right balance** and set the **right priorities** that support the realization of the business outcomes most effectively by **protecting the trust to do business**

## Know

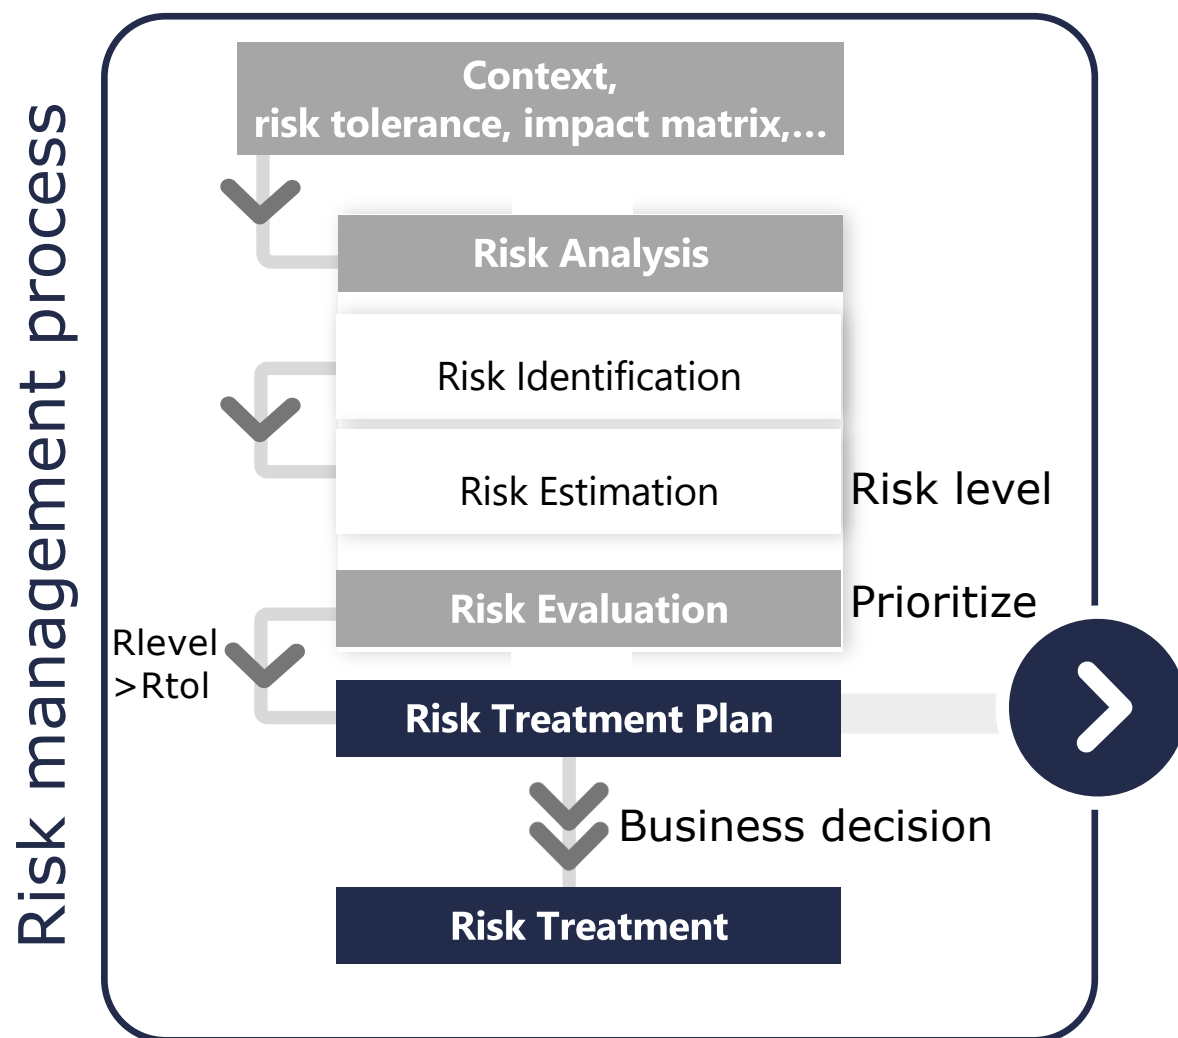

- your risk appetite
- your risk tolerance levels
- your business impact matrix
- the criticality of your assets
- who is responsible for risk management process
- who is responsible to take decisions

- **Identify risks** based on scenarios or dynamic input from your environment and risk events

- **Determine** the risk level

- **Evaluate and decide** if you are going to treat the risk or not

# Risk, the essence of your security approach

## Some important security measure to consider

### Risk mitigation measures

1. Endpoint protection:
2. Network protection: segregation and micro segmentation
3. Identity protection: MFA
4. Access control: least privileged acces
5. Monitoring and detection controls
6. Infrastructure: Vulnerability management and patching

...

# 1. Endpoint Protection & Security

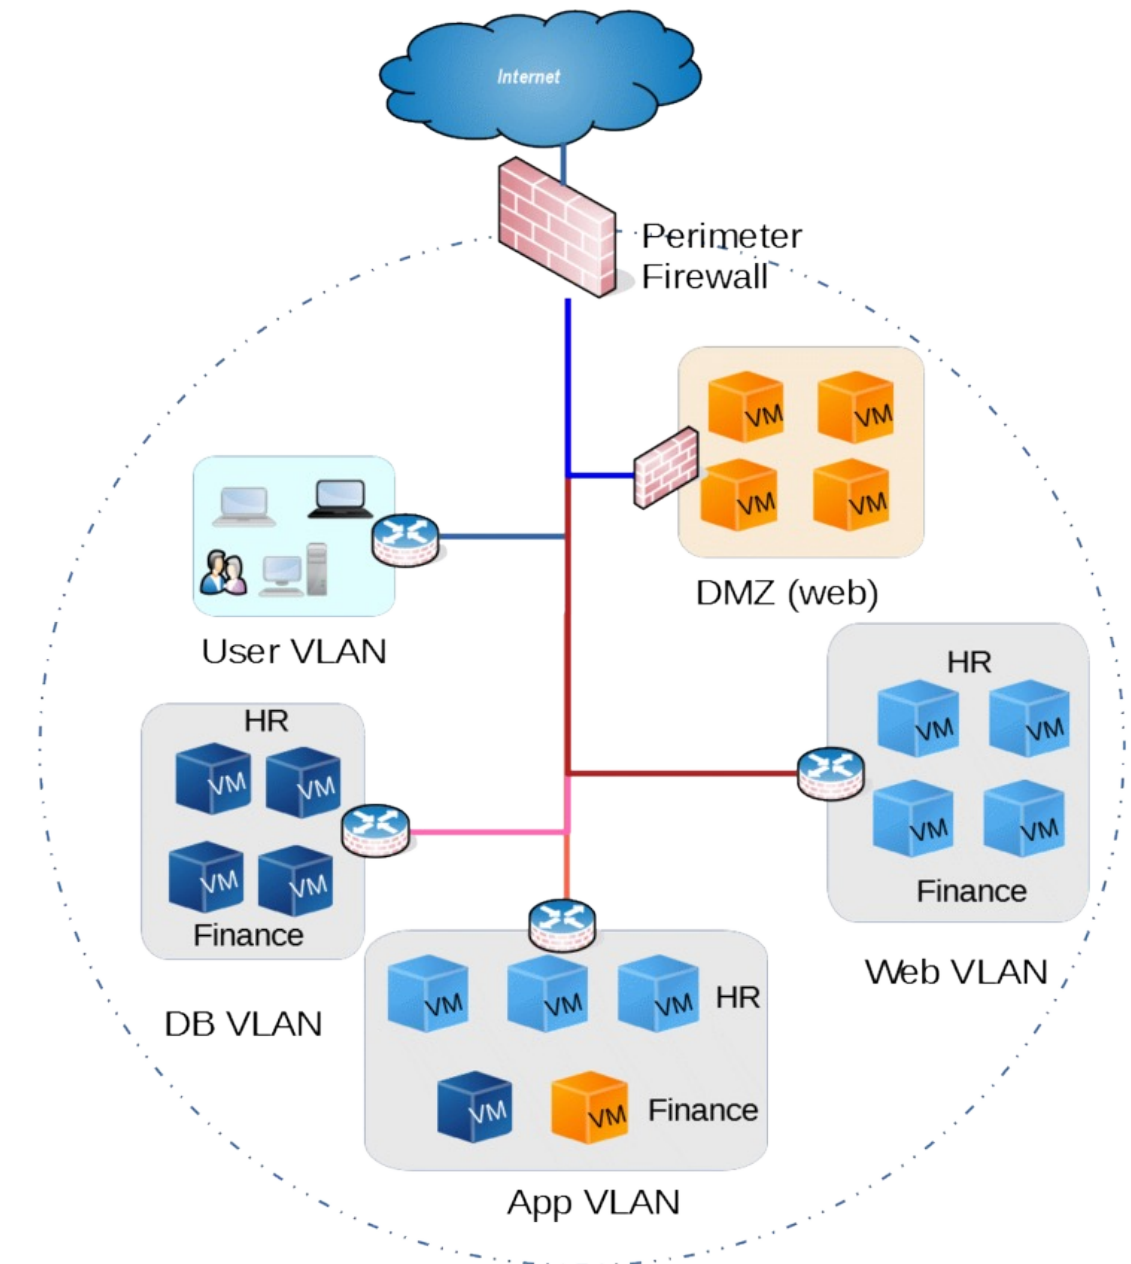

- The endpoint is untrusted
- Proper endpoint management in place to ensure device has proper security controls.
- Only approved devices are used
- Private key material is properly secured

## 2. Network security: segmentation

- Use micro segmentation to to maintain security
- Break security perimeters up into smaller regions on separate parts of the network based on data classification with separate access
- Users can't access different zones without extra authentication

# 3. Identity protection: MFA

- Cornerstone of Zero Trust
- Ensures users are properly validated before being granted access
- Uses hardware to fight credential phishing and impersonation

# 4. Access Control & least privilege access

- Minimize attack surface
- Strict controls on user and device access
- Monitor devices and users
- Provide the least privilege to do the job

## Least privileged access

- Minimize exposure between sensitive parts of the environment and give users only the access they need
- Never trust, always verify
- Need to know basis
- Part of wider IAM strategy

# 5. Monitoring and detection controls

- 24x7 monitoring
- SIEM/SOC services
- (M-)XDR services

2

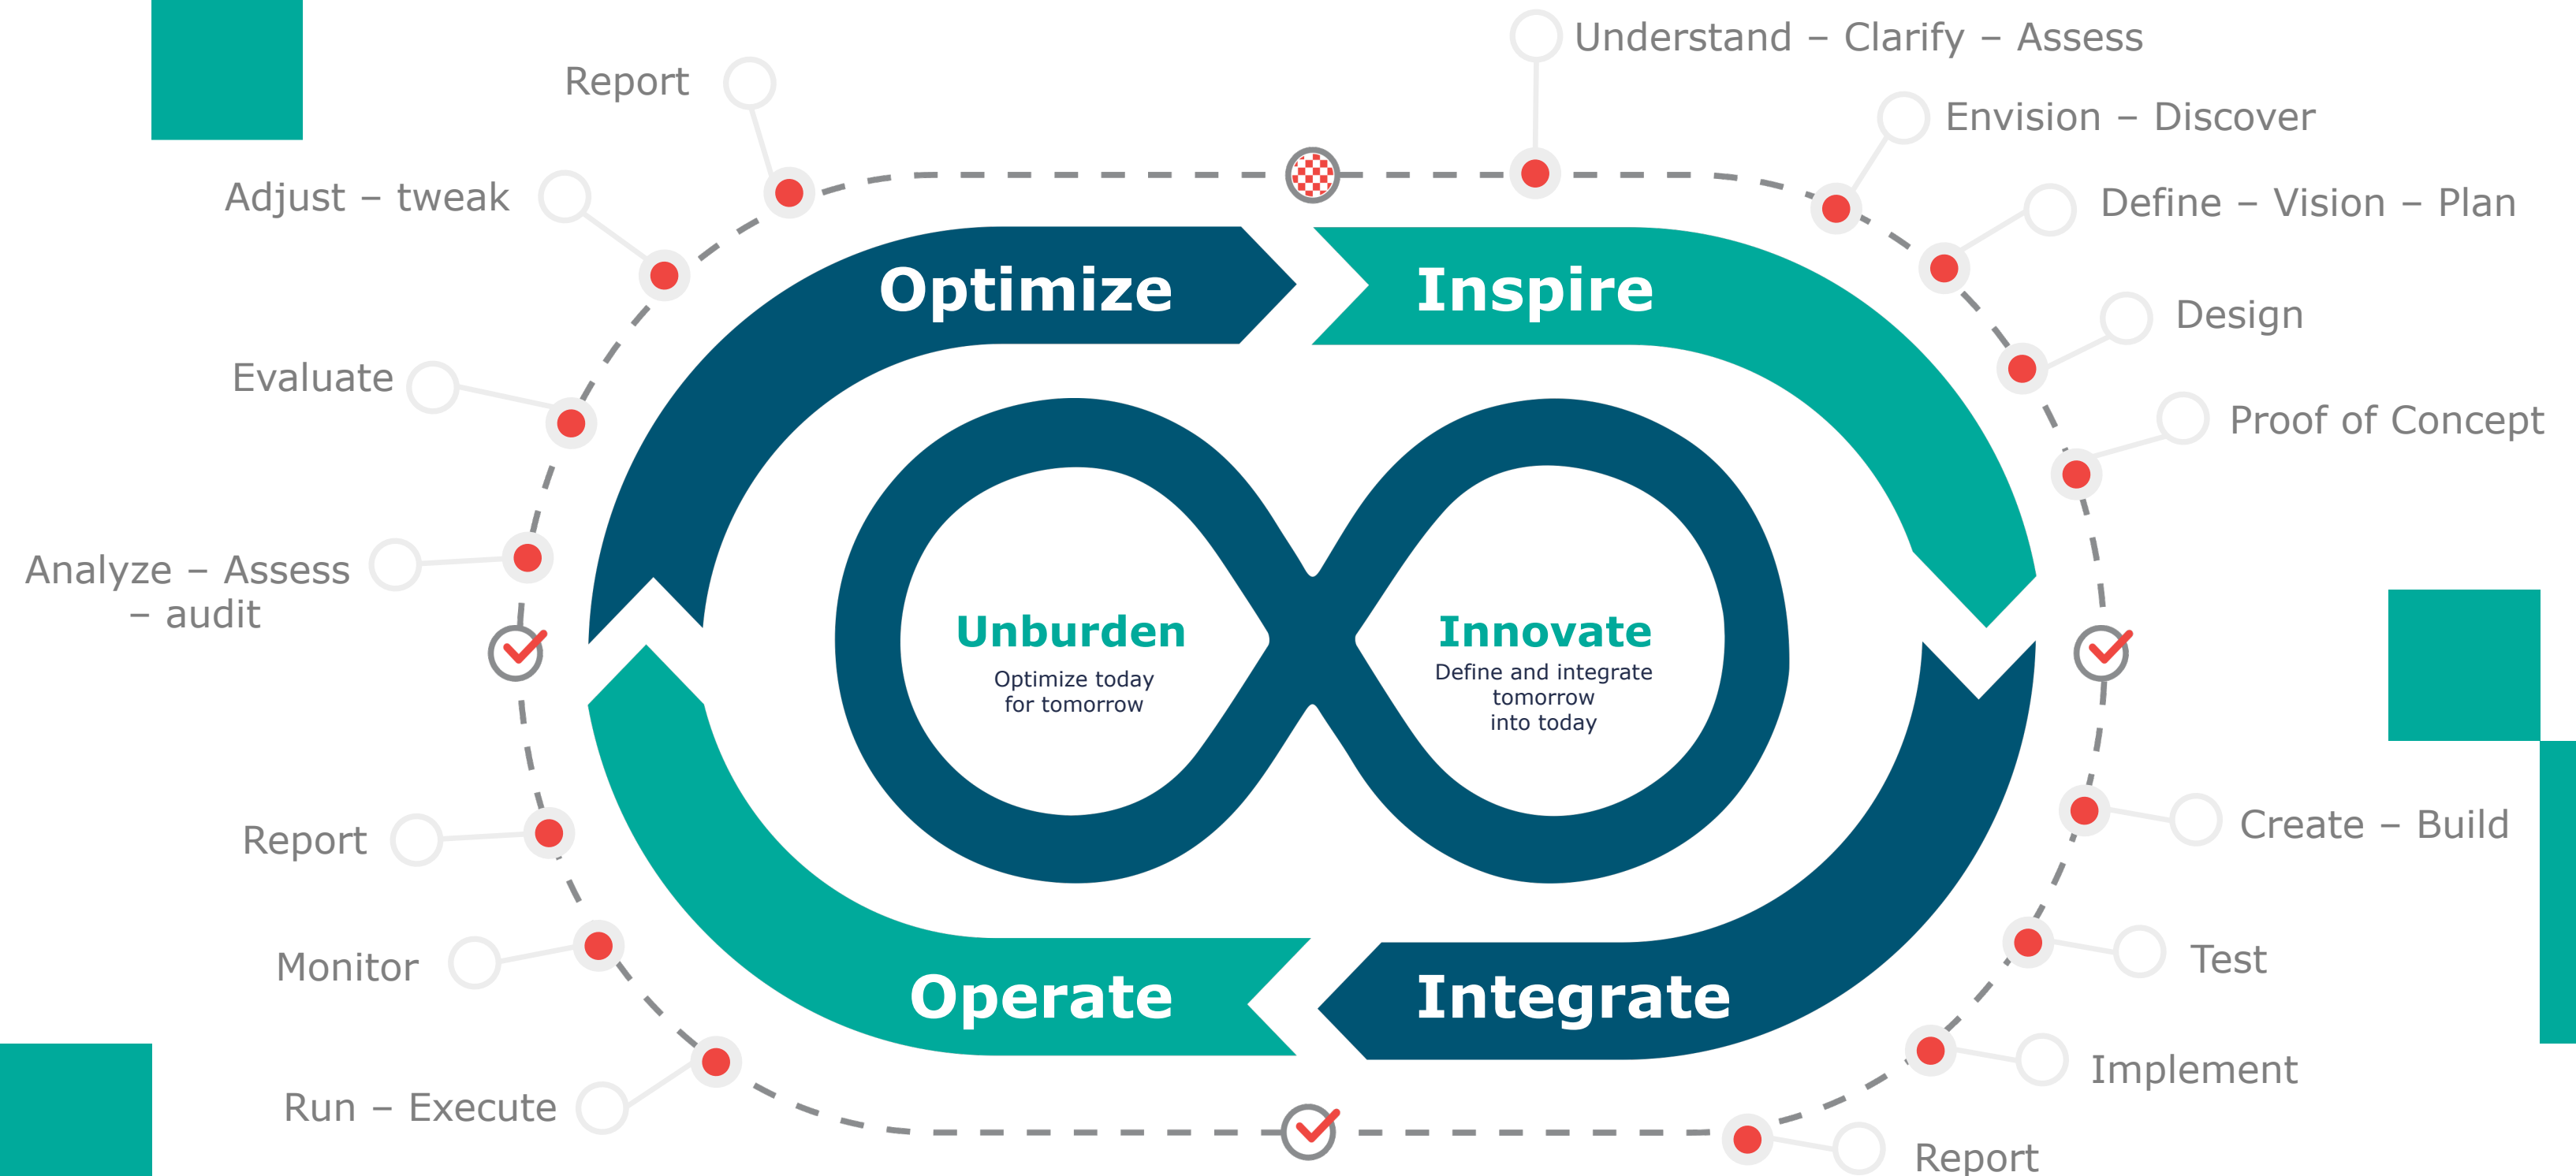

# How to start your digital security transformation journey

and make the shift

# Security transformation principles

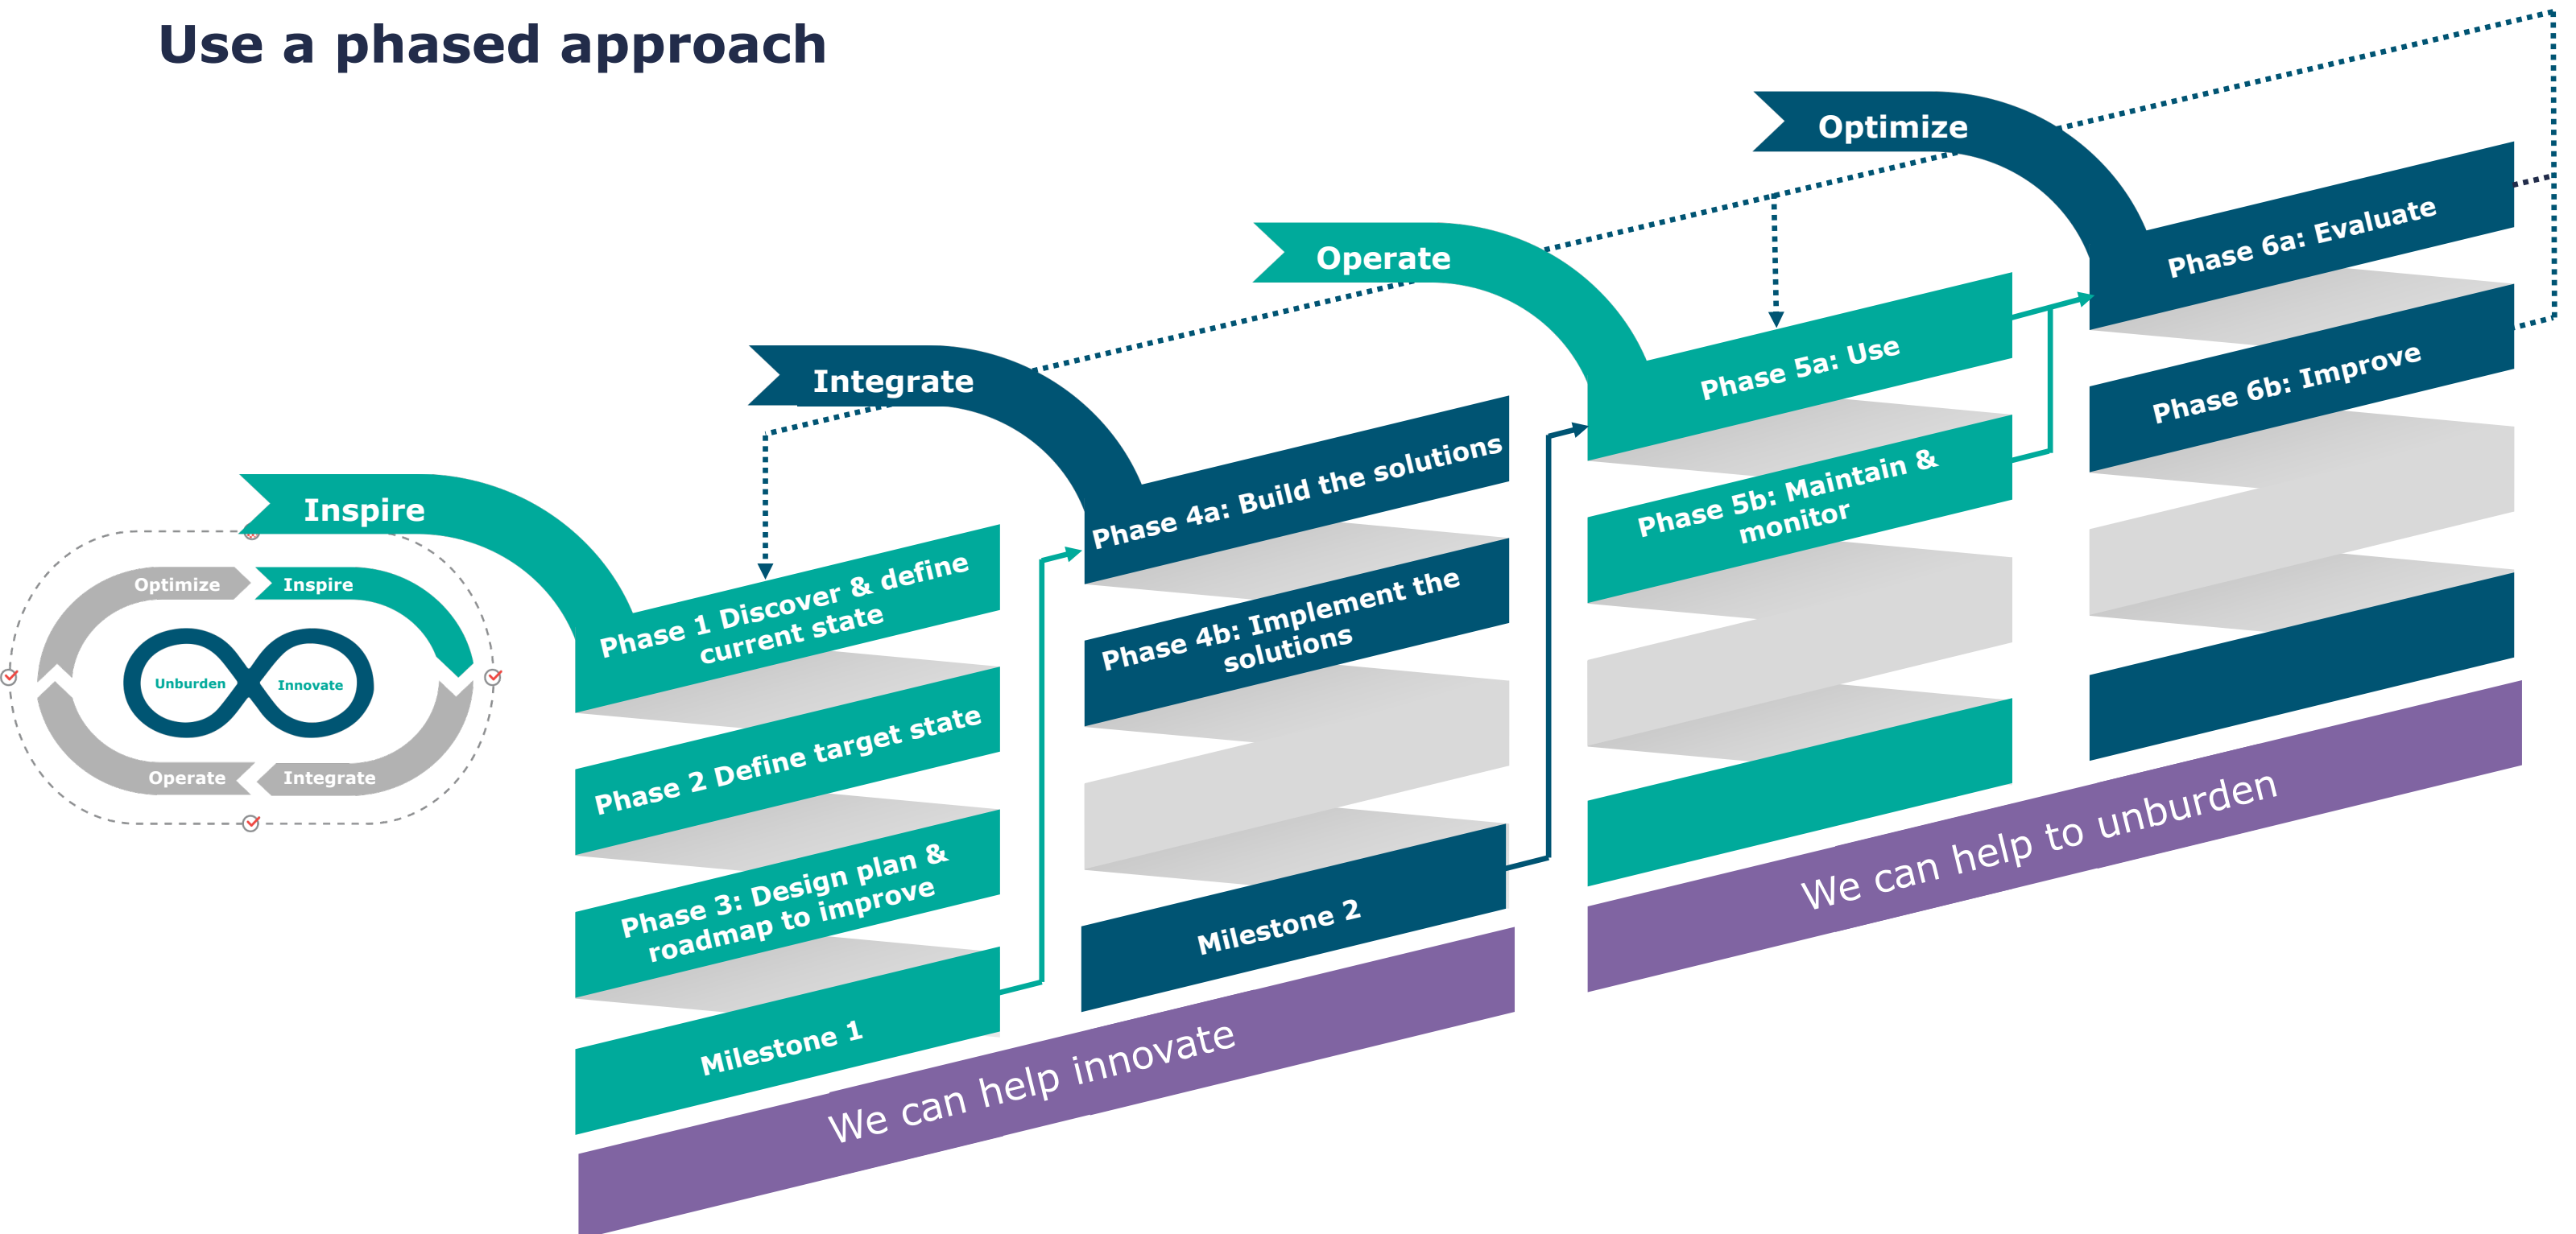

1. Start small and Keep pace
2. Use a business risk driven approach
3. Keep focus on the business value
4. Plan and position for change
5. Shift to zero trust in a controlled way
  1. Improve your security foundations to become transformation ready
  2. Shift to trust but verify
  3. Shift to full zero trust: never trust always verify

# Use the 4x4 digital security transformation accelerator model to drive your transformation

# Security transformation phased approach

Use a phased approach

# How to start with your first journey?

## Journey 1: improve foundations

Select the technology domain you find important to look into

Don't know where to start?

- Assessment cross domain
- workshop
  - discovery
  - envision
  - strategy
  - risk

# How to start with your first journey?

## Journey 1: improve foundations

Then use the phased approach and follow these steps

Always keep zero trust principles in mind

3

# Key Takeaways

# Key Takeaways

Security  
transformation  
Start small  
Keep pace  
Start your flow

Go for zero trust  
in a controlled  
way

Use a business  
risk driven  
security  
approach

MORE THAN  
**27 000**  
CONSULTANTS

2019 (Pro Forma)  
**€ 2.3**  
BILLION  
IN REVENUE

**26** COUNTRIES

FRANCE, SPAIN, PORTUGAL, BELGIUM, MEXICO, LUXEMBOURG, POLAND, MOROCCO, ROMANIA, SWITZERLAND, BRAZIL, TUNISIA, COLOMBIA, COTE D'IVOIRE, PERU, USA, ANGOLA, CAMEROON, SINGAPORE, ENGLAND, UAE, RP OF PANAMA, CHILI, COSTA RICA, DOMINICAN REPUBLIC, ARGENTINA

**5**  
VALUES  
& PRINCIPLE  
OF ACTION

- SOLIDARITY**  
We have a united entrepreneurial spirit.
- AMBITION**  
Our local power fosters our global success.
- EXCELLENCE**  
Our culture of excellence is a product of our daring.

- ENGAGEMENT**  
We grow but stay close to our clients.
- INNOVATION**  
We are constantly co-inventing the technology based business of our customers

Thank you!
