# THE TIME IS NOW

---

Today, the ability to make informed decisions in real time is essential for those who aspire to manage efficiently and adapt to the digital era.

The migration to SAP S/4HANA represents a fundamental step for those who want to lead the world. A process that not only involves adopting a new technological platform, but also entails a series of benefits that go beyond updating systems. It is precisely with this intention in mind that **Rise2S4** is born.

At Inetum, we understand the importance of every step in the journey to SAP S/4HANA, and we are committed to guiding you forward.

The challenges that arise in SAP S/4HANA migration projects are varied and often complex. From the risk of business disruption to potential incompatibilities with existing systems, data loss, performance issues, and economic or timing variances, we address these common concerns with targeted, success-oriented solutions.

At Inetum, we have forged the strongest value proposition in the market, designed to ensure success in projects like these. Our experience allows us to anticipate and avoid impacts and cost overruns, providing you with a comprehensive solution that goes beyond a simple upgrade.

We are here to be your reliable guide on your journey to more advanced and efficient business management.

# The change you need to make to stay one step ahead

We live in new times. We have been forced out of our comfort zone, leaving behind many of the expectations and ways of working we were used to.

In these times, it is crucial to strengthen our organisation's ability to adapt to meet the changes and challenges ahead; and, in terms of technology, that means having the right systems in place.

Organisations cannot ignore the growing demands of the digital economy. The constant increase in data (with volumes that can double every year), the rise of emerging technologies (such as generative artificial intelligence, machine learning, mobility, cloud, blockchain, etc.), together with the new habits of hyper-connected consumers looking for immediate answers, forces us to face a new reality.

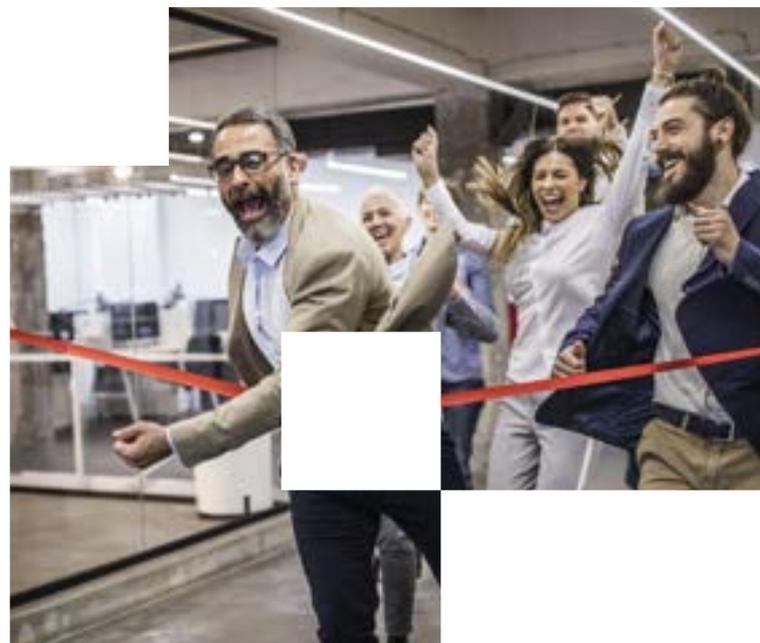

Among these resources, business applications, particularly ERP management systems, play a crucial role in the efficient development of business processes.

Reflecting on how to review and update these systems is essential for any organisation that aspires to keep up with the times and not fall behind.

SAP S/4HANA and Rise with SAP represent the key to effectively drive the digitisation of your organisation. We're not just talking about change; we're talking about a complete transformation, about adopting a new perspective and improving holistically. It's about rethinking our business processes to take the organisation to the next level, and SAP

S/4HANA is the platform that provides us with all the essential tools to carry out this crucial task.

This platform stands out as the perfect environment where we can pivot towards digitalisation. Its features not only ease the transition, but also allow us to reimagine how to address future challenges. SAP S/4HANA thus becomes the fundamental tool to accelerate adaptation to a constantly evolving digital environment. An approach that positions us to successfully address any situation that arises, turning today's challenges into tomorrow's opportunities.

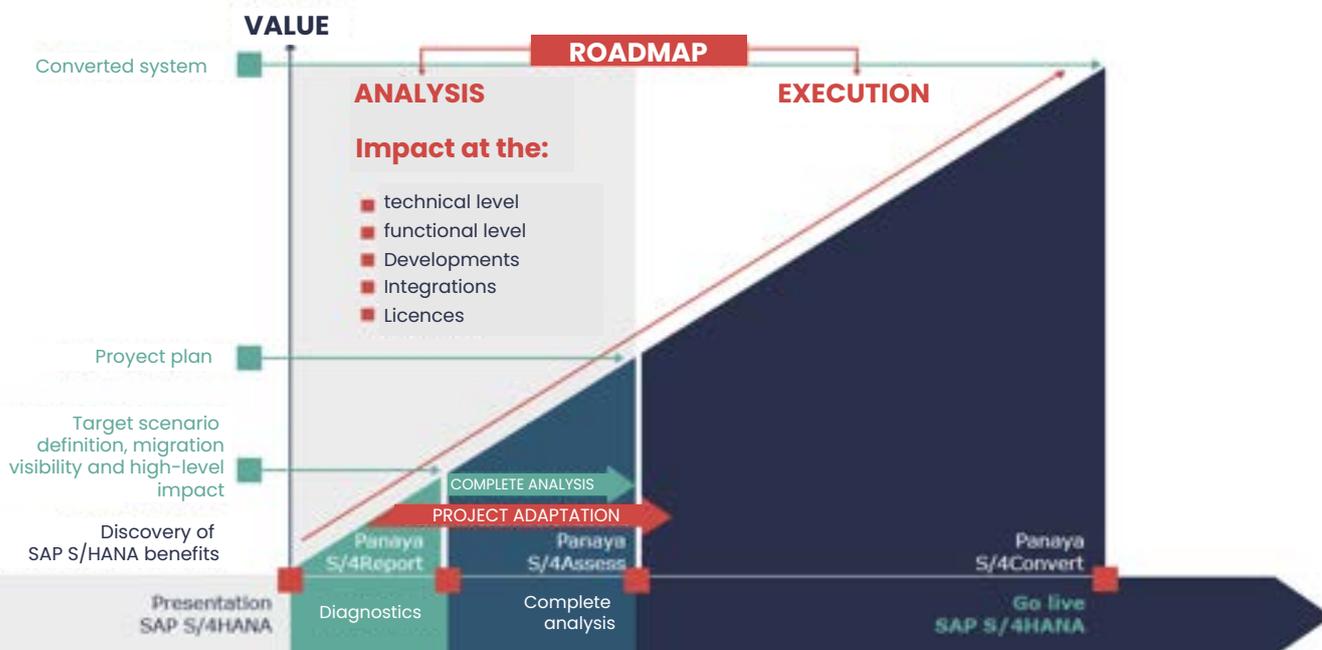

# Rise2S4: a methodology born from experience in real projects, just like yours

At Inetum, we started transitioning to SAP S/4HANA in 2015, at a time when projects of this type at a global level could be counted on the fingers of one hand.

Leveraging all this experience, we created our own Rise2S4 methodology, which complements the standard SAP Activate methodology and includes Panaya's tools for intelligent change management, within the framework of our global partnership.

This maximises efficiency, reduces risk and provides real-time visibility of progress to define mitigation strategies and ensure project success.

Our methodology is structured in two main blocks: analysis and execution, as shown in the image. For both phases, we rely on the use of Panaya's components associated with each stage of the process, as they offer significant added value.

During the analysis block, our approach focuses on identifying the impact on five dimensions – the technical level, the functional level, developments,

integrations and licensing – in order to define the most appropriate strategy and roadmap.

In the execution block, we carry out the actual migration following the parameters defined in the analysis block.

All of this is fully aligned with the manufacturer's SAP Activate methodology.

# Your migration to SAP S/4HANA, now with 100% guaranteed success

A migration to SAP S/4HANA may seem like a complex project, but it is greatly simplified if you have the right knowledge, methodology and tools.

## Rise2S4

### REDUCES RISKS

- Proactive approach to test evaluation
- Identification of blind spots
- Comprehensive impact management
- Early warnings for activating mitigation strategies
- Avoids information leakage

### INCREASES EFFICIENCY

- Reduction in project complexity thanks to AI
- Significant time and resource savings
- Automation of corrections
- Automatic generation and execution of test plans
- Automatic evidence capture

### PROVIDES REAL-TIME VISIBILITY

- Configurable dashboards and KPIs to track project and testing progress
- Information ready for immediate use in meetings and committees
- Avoids manual work for report preparation
- The whole team works on the same platform

## Qualified by the manufacturer

With Rise2S4, we are evolving to a future where our operations will be more agile, our decisions more informed and our organisations more competitive.

Backed and validated by SAP's own vendor, this package accelerates transformation, mitigating risk and increasing efficiency.

With Rise2S4, we are not just evolving, we are defining the course of our evolution. Inetum's new approach not only drives operational efficiency, but also avoids the opportunity cost overhead of delaying the decision to migrate. Every day of procrastination is a day of missing out on the advantages and benefits that this transformation can bring you.

Rise2S4 is more than a package; it is a commitment to excellence, driving an evolution that defines the course of our success.

# SAP S/4HANA MIGRATION

More efficient,  
more secure and with  
real-time visibility

## DIAGNOSTICS

In our methodology, we start with a diagnosis process to prepare for the SAP S/4HANA migration.

We use standard SAP and Panaya tools, as well as consulting, to establish the most appropriate migration strategy.

## COMPLETE ANALYSIS

In this phase, a detailed analysis of the impact points and the construction of the technical and functional design is carried out. The key result is the project plan being drawn up.

In addition, in order to optimise the timeframe, this process can be combined with implementing certain pre-projects, identified in the previous phase.

## EXECUTION

The execution phase is where the SAP S/4HANA migration itself takes place.

All the necessary tasks are completed here: code corrections, functional adjustments, change management, execution of test plans, training, etc.

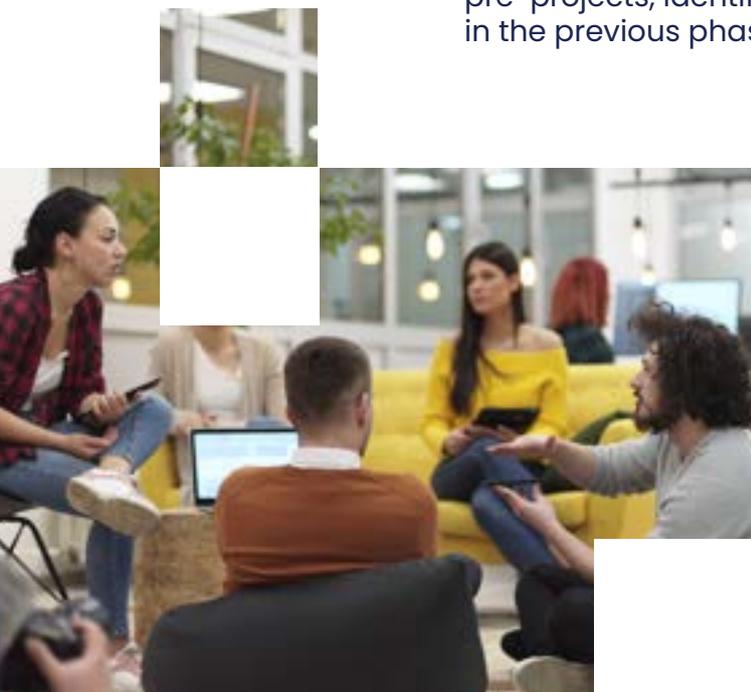

Thanks to Panaya, a large part of the project can be automated, e.g. the correction of a high percentage of Z-code.

## DEPLOYMENT

The project concludes with the Go-Live of the migrated system and an initial period of "max-attention" start-up support, ensuring a smooth transition until the system is operational and stable.

Subsequently, optionally, new iterations of process optimisation, back2standard, or continuing with the previously established type of support or maintenance can be initiated.
