Zero Trust Roadmap

	Identities	Devices	Network & Infrastructure	Applications	Data
TRADITIONAL	<p>No SSO between cloud and on-premises apps</p> <p>Visibility into identity risk is very limited</p>	<p>Devices are domain joined</p> <p>No overview and inventory of devices</p>	<p>Flat open network with unencrypted traffic</p> <p>Minimal threat protection</p>	<p>On-premises apps and no cloud apps</p> <p>No overview of shadow IT</p>	<p>Access is governed by perimeter</p> <p>Unencrypted and without classification</p>
ADVANCED	<p>Basic conditional access policies with basic MFA</p> <p>Cloud identity federation and visibility into identity risk</p>	<p>Devices are registered with a cloud identity provider</p> <p>DLP policies for BYOD</p>	<p>Basic network segmentation</p> <p>Cloud native filtering and threat protection</p>	<p>Apps configured with SSO + discover shadow IT</p> <p>Critical apps are monitored</p>	<p>Access is governed by classification</p> <p>Encrypted and classified via keywords</p>
OPTIMAL	<p>Password less authentication</p> <p>Phishing-proof MFA</p> <p>User behavior is analyzed in real time</p> <p>Enforce least privilege access</p>	<p>Endpoint threat protection is used to monitor device risk</p> <p>Access control is gated on device risk</p> <p>Continuous risk-based asset management</p>	<p>Micro segmentation</p> <p>ML-based threat protection and filtering</p> <p>All traffic is encrypted</p>	<p>Apps are available using least privilege access</p> <p>In-session monitoring and response</p> <p>Assess the security posture of cloud apps</p>	<p>Classification by AI</p> <p>DLP policies based on classification</p> <p>Access governed by cloud security policy engine</p>

←..... Visibility, analytics, automation & governance→

Zero Trust Architecture

- ←..... Visibility and Analytics→
- ←..... Automation→
- ←..... Governance→

A new reality needs new principles

Verify explicitly

Use least privilege access

Assume breach

Why do you need Information Protection?

- **You need to know where your (confidential) information resides!**
- **You need to know who has access to this information!**
- **In case of an audit, you need to prove that only the correct persons have accessed the data!**
- **You don't want everybody to know about your dirty company secrets!**

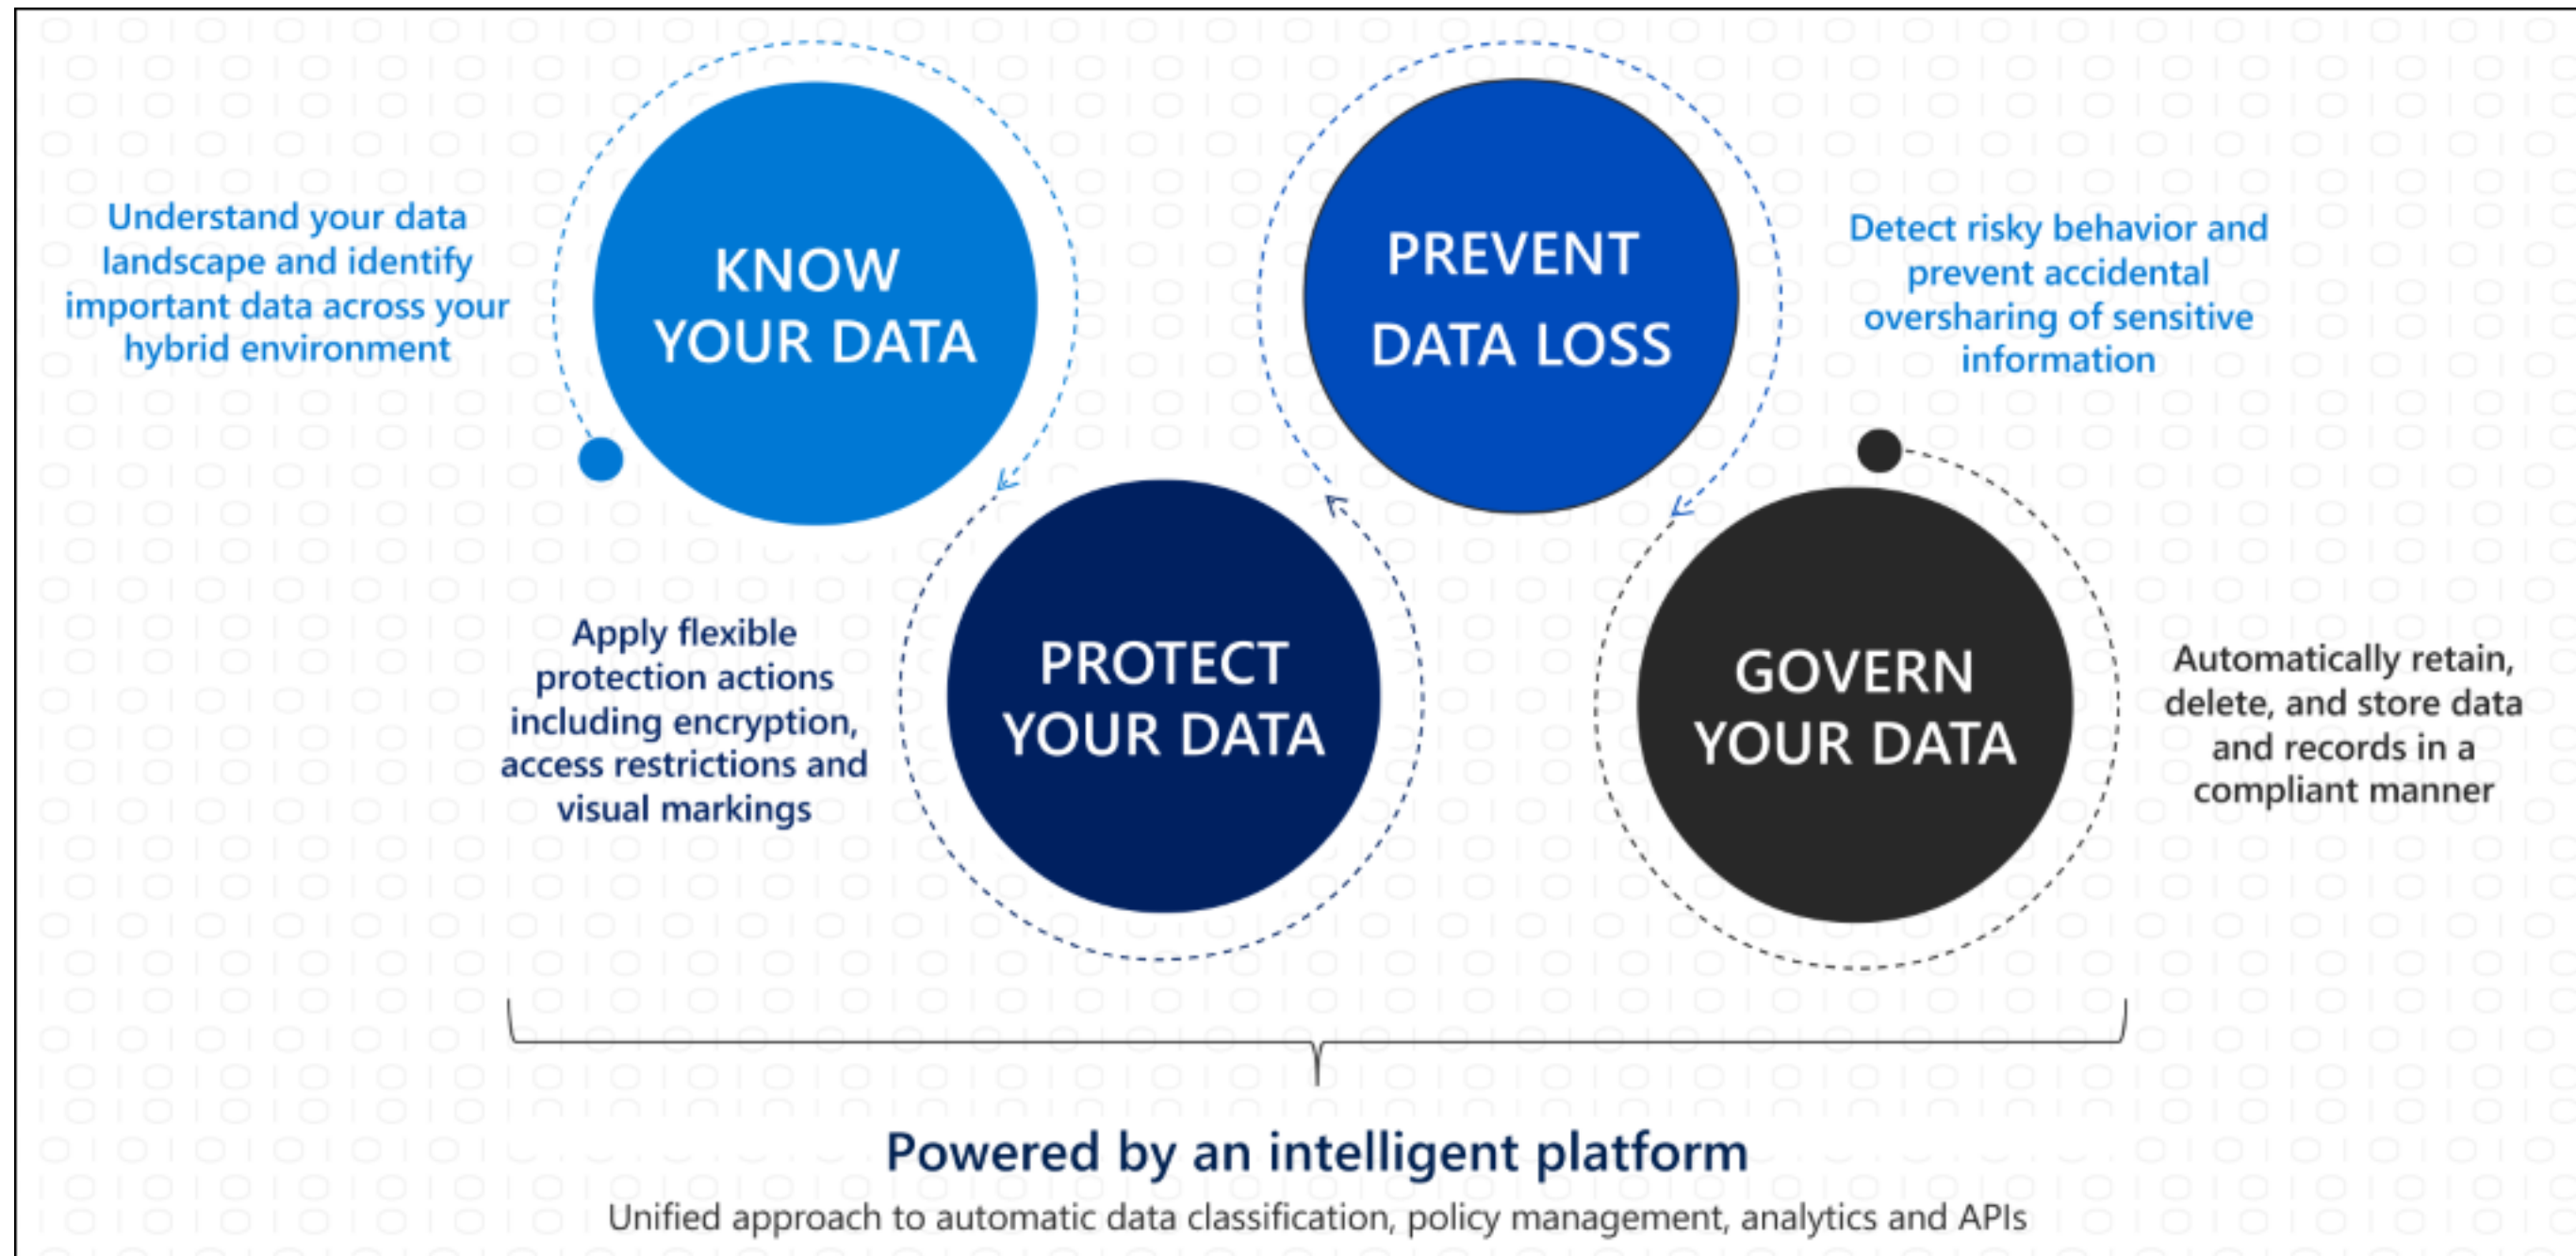

What is Azure Information Protection?

- **Azure Information Protection (AIP) is part of Microsoft Purview Information Protection.**
- AIP extends the labeling and classification functionality provided by Microsoft Purview with the following capabilities:
 - The unified labelling client
 - An on-premises scanner
 - The SDK
 - AIP also provides the encryption service and Azure Rights Management.

What is Microsoft Purview?

1. Know your data!

- **Sensitive information types**
- **Trainable classifiers**
- **Data classification**

2. Protect your data!

- **Sensitivity labels**
- **Microsoft Information Protection unified labelling client**
- **Double Key Encryption**
- **Office 365 Message Encryption (OME)**

3. Prevent data loss!

- **Microsoft Purview Data Loss Prevention**
- **Endpoint data loss prevention**
- **Microsoft Compliance Extension**
- **Microsoft Purview data loss prevention on-premises scanner**
- **Protect sensitive information in Microsoft Teams chat and channel messages**

4. Govern your data!

- **Safeguard your data for a certain period.**
- **Delete stale data.**
- **Check who accessed what data and what actions were performed on it.**
- **Make sure you are compliant to data standards like GDPR.**

"THAT WILL BE \$28.75... NOW IF I CAN JUST GET YOUR POSTAL CODE, PHONE NUMBER AND A SMALL BLOOD SAMPLE..."

Where can Purview policies be applied?

You can apply DLP policies to data at rest, data in use, and data in motion in locations, such as:

- Exchange Online email
- SharePoint Online sites
- OneDrive accounts
- Teams chat and channel messages
- Microsoft Defender for Cloud Apps
- Windows 10, Windows 11, and macOS devices
- On-premises repositories
- PowerBI sites
- ...
- Other data repositories by using the SDK or third-party connectors.

What is important when implementing Purview/AIP?

- Before starting with Purview implementation, there are some things you must consider:
 - Do you know what type of data you want to protect?
 - Do you have a clear overview of who must have access to what data?
 - Do you only want to protect data in the cloud, or also on-prem?
 - What labels are you going to use in what structure?
 - Do you want to apply a default label to documents, and what will be the impact of this?
 - Will everybody be able to change the default label of a document?

The compliance center (https://compliance.microsoft.com)

The screenshot shows the Microsoft Purview Compliance Center Home page. The left sidebar contains navigation options: Home (highlighted with a red box), Compliance Manager, Data classification, Data connectors, Alerts, Reports, Policies, Permissions, Trials, Solutions, Catalog, App governance, Audit, Content search, Communication compliance, Data loss prevention, eDiscovery, Data lifecycle management, Information protection, Information barriers, Insider risk management, Records management, and Privacy Risk Management. The main content area is titled 'Home' and features a 'What's new?' link and an 'Add cards' button. The central focus is a '30 active alerts' card, which is also highlighted with a red box. This card displays a table of alerts with columns for Alert name, Severity, and Last activity. Below the table is a 'Show more' button. To the right of the alerts is a 'Compliance Manager' card, also highlighted with a red box, showing a 'Your compliance score: 51%'. This card includes a description of Compliance Manager, a 'Learn more about Compliance Manager' link, and a progress bar for various categories: Protect information (27 / 1178), Govern information (0 / 138), Control access (29 / 742), Manage devices (0 / 1116), Protect against threats (0 / 2305), Discover and respond (63 / 279), and Manage internal risks (27 / 69). A legend indicates 'Current score' (blue) and 'Remaining score' (grey). The card is updated 'Yesterday at 10:05 PM' and includes a 'Visit Compliance Manager' button. At the bottom of the page, there are three additional cards: 'Communication compliance' (Minimize communication risks), 'Cloud app compliance' (Review cloud app compli...), and 'Retention label usage' (38 items with retention l...).

Audit data

The screenshot shows the Power Query Editor interface. The main area displays a table with three columns: Operation, UserId, and AuditData. The table contains 22 rows of audit data. The Query Settings pane on the right shows the 'APPLIED STEPS' section with 'Source' and 'Changed Type' listed. The 'Changed Type' step is highlighted, indicating that the data types for 'RecordId' and 'CreationDate' have been modified.
