## GenAI Booster

### Why?

Most companies and organisations started to experiment with GenAI tools during the last year or want to start some first tests in the coming months. But currently they do not know where to start and how to organize this.

### How?

To enable the adoption of GenAI as a new technology that will boost your productivity, you need to fully understand what it is and how GenAI can bring structural added value in your organisation. We will help you to define specific GenAI use cases that are most valuable for you to focus on.

### What?

With a GenAI booster, we will guide you to define challenges and specific GenAI use cases and solve them. At the end, we will provide you with a GenAI roadmap. During this booster track, we will work in co-creation sessions to inspire you with GenAI cases and examples. We will use GenAI tools during the project to show you the added value in practice during the project.

1 week  
5 steps  
8 exercises

9 participants (max)  
1 facilitator

1 challenge  
many use cases  
1 roadmap

Budget:  
€ 7500

## 1 Intake interview

We define your Booster expectations and objectives, and define your current GenAI maturity level. Based upon this input, we will draft a tailored GenAI Booster track for you.

## 2 Define your challenges

During a How Might We-session we define your most important challenges for which GenAI can be used.

We cluster all challenges and prioritize to focus on the main challenge

During the Sailboat exercise we define a common goal for the challenge. We list the risks of the GenAI track and identify what might slow us down and what helps us to achieve that goal.

## 3 Get inspired by GenAI

During a Lightning Demo session we inspire the team with practical, interesting and relevant GenAI cases and tools.

During a 'prompting' session, we provide you with the best practices of defining good prompts by using specific GenAI tools together.

## Gather GenAI ideas

During an interactive Ideation session, we gather all relevant GenAI use cases for the challenge and goal defined in step2

We discuss and prioritize all use cases in order to focus on the most important ones

We will use our GenAI Use Case Canvas to specify the chosen use cases in more detail, based upon all relevant dimensions for GenAI cases.

## 5 Define GenAI Roadmap

We do an impact/effort/risk analysis on the most important use case

We advise on the next steps to be taken in 4 areas (people, data, process, ethical/legal) in order to implement the chosen GenAI use case.

We provide you with a visual GenAI roadmap & report to implement the first use case and the logical next steps

# Copilot for Microsoft 365 workshop

## 3-phase engagement:

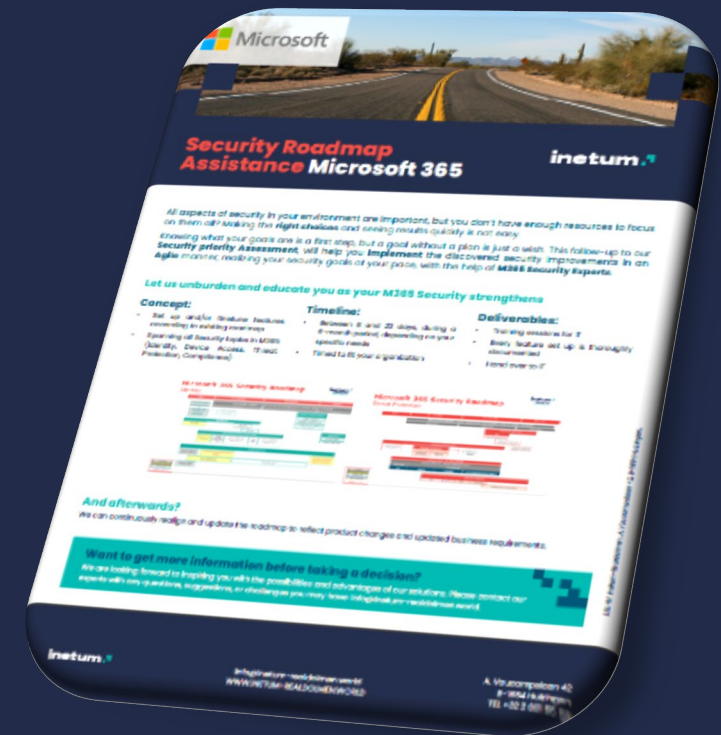

1. Assess your needs
2. Explore the possibilities
3. Build a plan to implement

# Security Roadmap Assistance

## Follow-up engagement to our *Security Priority Assessment*

- Setup and/or finetune features according to security roadmap
- All M365 Security topics  
Identity, Device Access, Threat Protection, Compliance
- Training + handover to IT

# Microsoft 365 Governance

## Create a governance plan

1. Vision and strategy
2. When to use what
3. Naming policies
4. Roles & responsibilities
5. Lifecycle management
6. Guest management
7. Admin centres
8. Governance automation

# Teams Calling assessment

## Get the most out of Teams

### 1. Inspiration

Premium features, M365 Copilot, next-level features

### 2. Assessment

Persona's, scenario's, integrations, licenses

### 3. Implementation plan

Recommendations, training- and adoption plan
