CLOUD SECURITY JOURNEY

Having access to company data anywhere, anytime and from any device has also increased the number of risks. The new modern workplace grows in complexity and requires customers to stay ahead of modern threats, not only from outside the organization but also from the inside.

Ever-evolving cybersecurity threats increase the requirements for organizations to protect their online and on-premises assets. You have probably heard about the statement “Identity is the new perimeter”, your digital identity is the door to access data from any type of device from any location. It is not only about identity but also about protecting your data, mitigating threats and managing your security operations.

Realdolmen is convinced that security is a **never-ending journey**. It is therefore inevitable to administer security in a proactive, constructive and pragmatic manner. That is why we have created an offering, tailored for each customer, based on their security needs, called the **Cloud Security Journey**.

SOME RECOGNIZABLE CHALLENGES

- The **increasing threats** from inside your organization i.e. via social engineering, breaches, leaks,...
- Nowadays users have more than one device (managed or not) and they want to access their data at all times. Even **bring their own device or wearable**. So not only identities are vulnerable but also devices, data, email;
- The use of **shadow IT** within your organization can be a real pain to your IT department, which has no control over them. It can be difficult to find the right way between “let’s share and be more productive” and still having control in a supportive and proactive way “behind the scenes”;
- Excessive use of **social media** is also a big security issue in a modern workplace;
- Finding the right balance between IT, security and business requirements without frustrating people involved;
- Can you retain control of **sensitive data** at all times?

OUR APPROACH

Strategic

The journey starts with a Strategic workshop which is crucial to have a good overview of the current security baseline, applied policies, laws and regulations, as well as the strategic choices the organization will make in the future.

Assessment

Realdolmen is your guide on your journey to a more secure Hybrid Identity. Together we will define how we can transform your current environment towards a level of identity security that belongs to today’s era. We capture your risks and vulnerabilities, identify recommendations and define the approach to realize your secure Hybrid Identity.

Security Workshops

After experiencing the possibilities of the Microsoft 365 security and compliance tools in the day to day life of an organization

(let’s call it a demo) we will have workshops around four security pillars:

- **Protecting the entrance:** During this workshop we will explain the possibilities of Identity and Access Management within the Microsoft 365 platform, capture your current approach and determine the next steps to be able to start with a secure baseline;
- **Protect my belongings:** This workshop will guide you through the possibilities of protecting your data, keeping your employees in charge but in a controlled way;
- **Detect the intruder:** Protection against threats, detect when a breach has occurred and remediate from an attack. These topics are subject of this workshop;
- **Security Management:** What is the current state of my security measures and is it possible to increase them? What about regulations and compliances like GDPR and ISO 27k? There are several dashboards that gives you a detailed overview and possible actions from within.

Technologies and services that are topic but not limited during these workshops: Azure AD Identity Protection & Governance, Microsoft Advanced Threat Protection, Microsoft Cloud App Security, Microsoft Information Protection, Secure Score, Compliance Manager, Password Protection, Privileged Identity Management, Intune, Data Loss Prevention, Azure Sentinel,...

PRIORITIZE, BUDGET AND PLAN

Based on all gathered requirements, decisions and advises, a security priority list will be created. This list contains all actions that need to be in place to align with the strategy and outcomes based on the different pillars. The budget indication will give you an idea for implementing the different security elements in your environment as well as the possible extra licenses.
